ABSTRACT

The fourth study of federal libraries provided the first nearly complete statistical survey of all federal libraries in the continental United States and overseas. It was anticipated that the results of the study could serve as a landmark for future federal planning and as a guide for the library community in responding to related activities on the state and local levels. The survey identified 2,313 federal libraries. Data were collected on 2,145. Expenditures for reporting libraries totaled \$191,825,822. The report includes summary statistics for all libraries, separate treatment of the national libraries, detailed findings for 1,386 libraries providing individual responses, and aggregate data for other reporting libraries. In the appendixes are given complete listings of the individual libraries queried, details of the survey methodology, and copies of the survey instruments. (Author/PF)

* Documents acquired by ERIC include many informal unpublished *

HIGHLIGHTS OF FINDINGS

- 2,313 Federal libraries were identified in fiscal year 1972 (table 1).
Of these:
 - 43 percent were special or technical libraries (health, science, and special)
 - 37 percent were general (quasi-public hospital, penal, and other general) libraries
 - 18 percent were educational (academic, quasi-academic, and school) libraries
 - 2 percent were "other" libraries (Presidential and systems headquarters).
- 1,744 libraries provided substantial data in the Federal Library Survey (table 3).
Of these:
 - 37 percent were special or technical
 - 36 percent were general
 - 24 percent were educational
 - 3 percent were other libraries.
- 64 percent of all Federal libraries identified were in the Department of Defense (table 1).
Of these:
 - 22 percent were special or technical
 - 42 percent were general (quasi-public)
 - ~~33 percent~~ were educational
 - 3 percent were systems headquarters.
- \$191,825,882 in total operating expenditures was reported in fiscal year 1972. Of this, about half was spent by the three national libraries (Library of Congress, National Library of Medicine, and National Agricultural Library)(table 6).
- On average, 64 percent of expenditures were for salaries and wages; 20 percent were for library collections (table 6).
- 59,283,718 volumes were held in reporting libraries (table 6).
- 32 percent of total volumes reported were held in the three national libraries (table 6).
- 45,014,967 items were circulated in fiscal year 1972 by those libraries that reported circulation information (table 6).
- 56 percent of total circulation reported was in general (quasi-public) libraries.
- 732,285 items were loaned to other libraries in interlibrary loan, while 521,572 items were borrowed, during fiscal year 1972 (table 6).

(continued inside back cover)

SURVEY OF FEDERAL LIBRARIES

Fiscal Year 1972

Prepared for the National Center for Education Statistics under an interagency transfer of funds (IAD-072-014) to the Federal Library Committee of the Library of Congress, which in turn arranged the development of this report, under its contract No. LC-958, to Edwin E. Olson. Since contractors undertaking such projects are encouraged to express professional judgment, their points of view do not necessarily represent positions or policies of Government agencies, and no official endorsement should be inferred.

NATIONAL CENTER FOR EDUCATION STATISTICS

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and, from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . . and review and report on education activities in foreign countries."--Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

FOREWORD

Federal libraries and their financial support had their beginning with the establishment of the Library of Congress in 1800. Statistical information about public, school, and society libraries has been collected and published by government agencies since the late 1860's.

The first general report about these libraries appeared as "Libraries of the Federal Government," Chapter X of Public Libraries in the United States of America, Washington, D. C., Department of Interior, 1876. This pioneering study provided no numerical data of consequence. The second report, Federal Departmental Libraries; a Summary Report of a Survey and a Conference, by Luther H. Evans, was published by the Brookings Institution in 1963. It contained some statistical data which are primarily descriptive and not analytical.

The third report, an exclusively statistical study, originated in the fall of 1965, when the Federal Library Committee and the Office of Education's National Center for Education Statistics (NCES) established a cooperative arrangement by which the committee developed the survey forms with the assistance of the national center. The forms were mailed by the Committee to Federal Libraries. NCES contracted for the editing and processing of the returns and the preparation of a report. The resulting publication Survey of Special Libraries Serving the Federal Government was released by the Department of Health, Education, and Welfare in 1968.

This fourth study is the first nearly complete statistical survey of all Federal libraries in the continental United States and overseas. It continues the cooperation between NCES and the Federal Library Committee of the Library of Congress and updates the existing information about Federal libraries.

The data collected in this study should provide planners in the legislative or executive branch of government with an enlarged overview of the scope and diversity of library operations. The data should also assist administrators of libraries to develop uniform reporting systems and strengthen the interchange of resources among Federal libraries and of the efforts to meet national needs. Accurate data on the size of collections, staff, and budgets of individual Federal libraries will assist departments and agencies planning for library services.

The National Center for Education Statistics gratefully acknowledges the cooperation of all those who participated in this survey and made its publication possible.

Theodore Drews, Acting Director
Division of Survey Planning
and Analysis

Frank L. Schick, Chief
Library Surveys Branch

PREFACE

The national library community has long felt the need for the more uniform and comprehensive statistical reporting essential for a broad, realistic appraisal of current needs and services in relation to costs and increased demands for library services. Federal library statistics in particular have lacked a suitable base for measuring and comparing operating expenditures, adequacy of holdings, size of staff, types of services, scope of users, organizational patterns, and other data essential for management decisions. While there are national statistics published with some regularity for public and college and university libraries, there is no reliable comparable information published for Federal libraries. The most recent survey of Federal libraries, the 1965-66 study by Frank L. Schick,^{1/} covers only about 450 special or technical libraries serving the Federal Government. No available statistics provide an adequate description of the total Federal library community which is composed of libraries of all types, and also includes quasi-public, academic and quasi-academic, and school libraries in the United States and abroad.

As Federal libraries continue to grow both in numbers and in holdings, as the Federal Government considers new possibilities for departmental and agency organizational patterns, and as the scope of federally supported activities extends into related functions at the State and local levels, the need for standard comprehensive statistical data about Federal libraries becomes greater. Comprehensive library planning at the Federal level requires up-to-date statistical information as a basis for determining future resources and programs. A standard method of reporting is essential to permit orderly and meaningful comparisons of data from each library and to provide the documentation necessary for the development of guidelines for Federal library planning, cooperation, staffing, and funding.

A standard pattern for statistical reporting will also facilitate and strengthen the interchange of resources among Federal libraries and the efforts to meet national needs to a greater degree than has been possible in the past. Accurate data on the size of collections, staff, and budgets of individual Federal libraries will not only assist individual agencies and departments in their planning for the future but, in addition, will point up the full range of holdings and the similarities and variations of objectives among programs, thus contributing to better understanding of the value that can come from combined efforts. Such cooperative utilization of Federal library resources can be a vital ingredient in the Federal Government's basic objectives of improving services and achieving economies. A uniform statistical reporting system would aid significantly in the realization of such an accomplishment.

^{1/} U. S. Office of Education. Survey of Special Libraries Serving the Federal Government. Washington, Department of Health, Education, and Welfare, 1968. (OE 15067)

Since its establishment in 1965, the Federal Library Committee (FLC)^{2/} has made a major effort to alleviate this problem. For years Federal library administrators and other officers have been limited by inadequate data in attempting to answer such questions as the following: How many Federal libraries are there? What is the size of their staffs? How large are their collections? How many square feet of space do Federal libraries occupy? What percentage of the total Federal budget goes into support of Federal library services? What are the important differences in their structure and services? To what degree do they meet national as well as agency needs?

There is information available about the national libraries - the Library of Congress, the National Agricultural Library, and the National Library of Medicine. A few other libraries which provide nationwide services in their respective areas of specialization, such as the library of the Department of the Interior, issue annual statistical information. However, specific information about the large bulk of Federal libraries, especially those that are almost entirely mission-oriented, is either nonexistent or only available in a scattered and noncomparable form which is useless in any attempt to arrive at a comprehensive analysis of the Federal library community.

As a move to correct this deficiency, the Federal Library Committee (FLC), in cooperation with the U. S. Office of Education (USOE), sponsored the Survey of Special Libraries Serving the Federal Government^{3/} published by USOE in 1968. Some useful and much needed data were developed by this limited effort, undertaken in cooperation with the program of the National Center for Educational Statistics (NCES).^{4/} However, to meet the many and varied statistical information requirements of Federal libraries and their users, the committee felt a deeper and more comprehensive program should be inaugurated - one closely coordinated with the Library General Information Survey (LIBGIS) system developed by NCES.

More recently, the FLC's subcommittee on statistical programs^{5/} reexamined the need for a consolidated collection of data about Federal library resources and operations and concluded that this area merited immediate attention. The committee recognized the many problems inherent in this effort:

^{2/} The Federal Library Committee (FLC) was established in 1965 to achieve better utilization of library resources and facilities; to provide more efficient planning, development, and operation of Federal libraries; and to promote an optimum exchange of experience, skill, and resources among Federal libraries. The Committee is composed of library representatives from Federal agencies and the three national libraries.

^{3/} U. S. Office of Education, op. cit.

^{4/} The name of the NCES was changed from "National Center for Educational Statistics" to "National Center for Education Statistics" in 1974.

^{5/} The subcommittee on statistical programs of the FLC was established for the purpose of developing the collection of data that are standardized for Federal libraries and information centers, and compatible with those collected outside government.

- the necessity of securing agreement among agencies on the basic information to be collected,
- the need to assure continuity so that comparable data might be developed,
- the importance of correlating the findings with other statistical library data collection programs,
- the need for nationally accepted definitions to assure accurate reporting,
- the value of high-level management backing to secure general acceptance, and
- the necessity for including basic data applicable to all libraries with full opportunity for individual agencies and libraries to collect additional information to satisfy their own requirements.

After the decision to proceed with a new survey of Federal libraries had been made, its purpose was defined: to identify the universe of Federal libraries regardless of size or location in the continental United States and overseas, to collect some basic data from all libraries, and to develop a report of these data which would be useful to the Federal library community and to all interested persons in its environment. The principal guide for deciding on the content of the survey was to be the Library General Information System (LIBGIS), a recently developed national library statistics data system of the National Center for Education Statistics (NCES).

Although NCES has expressed hopes that all surveys concerning libraries and library programs can be included in one survey package, accounting for the activities of Federal Government libraries has posed particular problems. The LIBGIS plan is based on cooperation at the State level by appropriate agencies which distribute questionnaires to the various libraries in each State. This mode of data collection presents problems, however, for collecting data for the Federal libraries. Since there are no lines of authority or funding from an individual State to Federal libraries in that State, a State agency is not an appropriate data collection instrument for such a library, which is administratively oriented toward a governmental agency which is probably located in the metropolitan Washington area. If the Federal library community can be considered as a "51st State," then by analogy the only appropriate agency to coordinate data collection is the Federal Library Committee. Utilizing this framework, and with the added prestige of being chaired by Quincy Mumford, Librarian of Congress, the FLC was able to obtain the responses of more than 90 percent of the libraries identified in this study. This compares favorably with the completion rates in most States.

The importance of the 1972 survey of Federal libraries is underscored by the fact that this study represents the first comprehensive statistical survey of all types of Federal libraries, located all over the world, and the first followup study for the subset of special or technical libraries which were surveyed in 1965. It is anticipated that the results of this study may serve as a landmark for future Federal library planning and as a guide for the library community in responding to related activities on the State and local levels. Involvement by the National Center for Education Statistics seems particularly appropriate as does also the inclusion of Federal libraries within its library survey responsibilities.

The Federal Library Committee would like to express its appreciation for financial support and assistance with this project from its inception to completion to the National Center for Education Statistics, and Dr. Frank L. Schick, the Chief of its Library Surveys Branch. Ann Dietrick Dalton from the Library Surveys Branch acted during the beginning of this study with great efficiency as project monitor.

Our appreciation is extended to the following members of the Statistical Subcommittee of the Federal Library Committee for their comments at critical stages of the survey plan: Hazel Austin, Veterans Administration; Gerald M. Coble, Naval Training Support Command; John L. Cook, Randolph Air Force Base; Logan O. Cowgill (deceased), Water Resources Scientific Information Center; Ruth Fine, Office of Management and Budget; Elizabeth Schwartz, Army Library Program; and Samuel Waters, National Agricultural Library.

Frank Kurt Cylke, the former Executive Secretary of the FLC and now Chief, Division for the Blind and Physically Handicapped, Library of Congress, was responsible for developing the original proposal and for guiding the effort in the early stages. Paul Howard, a former Executive Secretary of the Federal Library Committee, and Joel Williams, formerly with NCES, consulted on important questions in the design of the survey.

Dr. Edwin E. Olson, College of Library and Information Services, University of Maryland, was principal investigator of the survey and responsible for every phase of the effort. Marcia C. Bellassai drafted the analysis of the data and was responsible for analytic tables throughout the report and handled the major editing and rewriting of the final draft, including the review and corrections of various tables. Rosemary Merrit assisted in the first phases of the survey including the drafting of the survey instrument.

Joan B. Shields edited the questionnaire and Judith Closson Olson was responsible for organizing and developing headings for the computer-produced tables. Peggy Thomen prepared the final copy for the report.

The Information Service Organization (ISO) of the Library of Congress handled the data processing and computer tabulation for the various tables of the survey. ISO Director Paul Reimers and Walter Gallagher assisted in the planning and preparation of survey data for processing and tabulation. Stanley Thomas served as the day-to-day manager of the processing of data.

James P. Riley
Executive Secretary
Federal Library Committee

CHAPTER 1

INTRODUCTION

The Federal Library Universe

Federal libraries as an all-inclusive term, can be used to designate facilities as diverse as the special and technical libraries serving governmental agencies and the educational libraries serving Indian schools in the United States or military dependent schools abroad. It covers the national libraries, Presidential libraries, Federal health and medical, engineering and science, and other special and technical libraries, as well as the academic libraries of military academies and Indian colleges and the quasi-academic libraries of the military instructional schools.

Also included among Federal libraries are the quasi-public libraries for servicemen and their dependents at military establishments both at home and abroad, and for patients in government hospitals, prisoners in Federal penal institutions, and foreign readers at U. S. Information Agency libraries and reading rooms throughout the world.

The problem of defining a complete universe of Federal libraries is complex. While some Federal libraries have long and distinguished histories of service, others coexist with the governmental agencies they serve. Still others, particularly field locations of the military services, are created and closed with military redeployments. Today's universe of Federal libraries is not necessarily the universe of tomorrow.

Development of Survey

The Federal libraries survey for fiscal year 1972 was designed as a comprehensive study of all of the types of libraries serving the Federal establishment and its agencies throughout the world. The methods for establishing and surveying this broader universe are detailed in appendix B.

Federal libraries numbering 2,313 were identified; their distribution by governmental organization and type of library is shown in table 1. Special or technical libraries, including health and medicine (health), science and engineering (science), and other special and technical libraries (special) made up 43 percent of this universe, with the quasi-public general libraries accounting for an additional 37 percent, and academic, quasi-academic, and school libraries representing 18 percent. The remaining 2 percent were libraries designated as "other" - 6 Presidential libraries and 45 systems headquarters.

Development of the final survey universe necessitated some deletions from the identified total universe. Four libraries under the Executive Office

TOTALS	2,313	986	850	426	51	100

^{1/} Includes health and medicine, engineering and science, and other special, and technical libraries (special).

^{2/} Includes hospital, penal, and quasi-public libraries (other general).

^{3/} Includes academic and quasi-academic, and school libraries.

^{4/} Includes 45 systems headquarters and 6 Presidential libraries.

^{5/} Less than 1 percent.

^{6/} Includes 4 libraries deleted from the survey at agency request.

^{7/} Includes 269 Army field law libraries deleted from the survey because data were unavailable.

^{8/} Overseas libraries of the U. S. Information Agency, deleted from the survey because data were unavailable.

^{9/} Presidential libraries.

of the President were deleted at agency request. In addition, the U. S. Information Agency reported that statistics for its overseas libraries were not available, and this group of 132 libraries was also deleted. Divided responsibility for the Army field law libraries made complete reporting for this group difficult, subtracting another 269 libraries from the survey universe. With these deletions, the final survey universe included 1,908 Federal libraries.

Response to Survey

A total of 1,744 of these 1,908 Federal libraries (91 percent) provided all or substantial amounts of the data requested in the survey. Responses for individual libraries were provided by 1,389, including the 3 national libraries, while data aggregated for groups of libraries were reported for 355 libraries (table 2).

Table 2.--Summary of response to survey of Federal libraries, fiscal year 1972

	<u>Number</u>
Universe of Federal libraries identified	2,313
Excluded (information unavailable)	405
Survey universe	1,908
Total libraries responding	<u>1,744</u>
National library responses	3
Individual responses	1,386
Aggregate responses	355

Minimal data were also received for 401 of the 405 deleted libraries. These data are included in summaries of total data in chapter 2 and briefly tabulated in chapter 5. Counting the limited data from the U. S. Information Agency overseas libraries and the Army field law libraries, some data were received for 2,145 of the total 2,313 Federal libraries identified in the 1972 survey. Table 3 shows the distribution of individual and aggregate responses, by governmental organization and type of library.

Of the 164 libraries which failed to provide responses to the survey, 65 were special or technical libraries, 81 were general libraries, 14 were educational libraries, and 4 were other libraries (Presidential and systems headquarters). Correlations between percentages of types of libraries in the final survey universe and in the response group were high, with special or technical libraries accounting for about 37 percent of each, and Presidential

Totals	1,908	1,744		648	637	412	47

^{1/} Aggregate response includes reports covering more than one library.

^{2/} Analyzed in chapter 3.

^{3/} Detailed findings for libraries providing individual responses are discussed and compared in chapter 4.

^{4/} Findings for groups reporting aggregate data are discussed and summarized in chapter 3.

and systems headquarters libraries making up about 3 percent of both. Educational libraries, which constituted a bit over 22 percent of total libraries in the final survey universe, provided almost 24 percent of responses and were slightly overrepresented. General libraries, with almost 38 percent of the universe and somewhat more than 36 percent of responses, were slightly underrepresented. Percentages of response by governmental organization are shown in table 3.

Comparison with Scope of Previous Surveys

Previous Federal library surveys, published in 1876^{1/}, 1963^{2/}, and 1968^{3/}, considered only those special libraries in the United States that provided reference and research materials to agencies of the Federal Government.

The survey universe of the most recent study of Federal libraries, the 1965 survey which reported statistics for fiscal year 1965, totaled 508 libraries, slightly more than one-quarter of the Federal library survey universe of fiscal year 1972. Detailed findings were reported for 358 individual libraries in 1965, with summary statistics supplied for an additional 79. Table 4 provides a comparison of scope for these two surveys.

Table 4.--Comparison of scope of Federal library surveys,
fiscal years 1965 and 1972

	<u>Fiscal Year</u>	
	<u>1965</u>	<u>1972</u>
Total Federal libraries identified	NA	2,313
Universe of Federal libraries surveyed	508	1,908
Number of libraries providing detailed response	358	1,389
Number of libraries providing summary data	79	355
Total libraries providing substantial data	437	1,744
Percent of universe that provided data	86	91

Special or technical libraries, including the three national libraries, provided the entire universe for the fiscal year 1965 survey, with no data collected on the other types of Federal libraries. Table 5 shows the numbers and distribution by agency of these libraries for fiscal year 1965 as compared with fiscal year 1972.

^{1/}U. S. Office of Education. Public Libraries in the U. S. A. Chapter X "Libraries of the Federal Government." Washington, D. C., Department of the Interior, 1876.

Department of Defense libraries	136	31	243	37
Total special or technical libraries responding	437	100	648	100

Health sciences accounted for almost half of all Federal special or technical libraries in 1965, but only for 34 percent of Federal special libraries in 1972. Data comparisons for special libraries in 1965 and 1972 are in chapter 2.

Organization of the Report

Summary statistics for all of the 2,145 libraries providing some data are presented in chapter 2. Because of their importance in the Federal library community and their stature in relation to other Federal libraries, the national libraries are treated separately in chapter 3, while chapter 4 offers detailed findings for the 1,386 other libraries providing individual responses in the survey. Aggregate data, for those groups of libraries for which individual reports were not available, and for the U. S. Information Agency overseas libraries and Army field law libraries for which only minimal data were provided, are covered briefly in chapter 5. Current problems and developing trends in Federal libraries are discussed in chapter 6.

Complete listings of the individual libraries queried in the survey, with the detailed statistics provided, make up appendix A. Appendix B details the methodology used in developing the survey, while appendix C contains copies of the survey instruments utilized for the collection of data.

In reviewing this report, the reader is advised to examine first the questionnaire instructions and definitions for subsets in appendix C-2, and the data collection instrument (appendix C-1).

CHAPTER 2

SUMMARY OF DATA FROM ALL RESPONDING LIBRARIES

Overview

Of the 2,313 libraries identified in the total universe of Federal libraries, 2,145 reported at least some data. Table 6 presents a summary of some of these figures for national libraries, libraries reporting individual data, libraries reporting aggregate data, and libraries reporting minimal data. Because of the broad variation in response to particular items of data, the percentage of libraries reporting the data within each group are shown. Totals are presented for the 1,744 libraries that submitted substantial data as well as for all data received.

Expenditures for all Federal libraries reporting totaled \$191,825,822, of which 20 percent went for materials and 64 percent to payments for salaries and wages. From a total collection of 59,283,718 items, 45,014,967 items were circulated. An additional 732,285 items were loaned to other libraries in interlibrary loan, while Federal libraries borrowed 521,572 items. Ratio of collection size to circulation by libraries shows that the overseas libraries of the U. S. Information Agency and overseas Special Services libraries of the Department of Defense had substantially greater circulation of holdings than did any other type of library. More than half of the special or technical libraries reporting failed to report circulation statistics: Army and Air Force dependent school libraries overseas were also unable to provide such data.

Salaries and wages was another area with poor response. Only 76 percent of the libraries reporting more than minimal data provided this information. Of the 289 dependent school libraries overseas, only the 13 Navy libraries in the Atlantic area gave salary figures. It is probable that since Army and Air Force library employees in dependent schools overseas are paid with other school staff under Public Law 86-91^{4/}, these data were not separately available for library employees in the European and Pacific areas. Sixty percent of the other libraries failing to report expenditures for wages and salaries were Army quasi-public libraries in Europe, where only one of the post libraries provided the data. Army general libraries in Alaska and Asia did provide the requested figures.

^{4/} Most school librarians serving in the overseas military dependent schools are hired under Public Law 86-91 Defense Department Overseas Teachers Pay and Personnel Practices Act. Salaries are part of school expenditures rather than separate library expenditures, and positions are not defined within normal Federal library classification schedules.

Table 6.--Summary statistics for all Federal libraries reporting

Army Library, where they are included in tables 7 and 8 following, in table 44, chapter 5, and in tables A-I and A-II, appendix A. These expenditures for the JAG libraries are included in libraries reporting minimal data, column 11.

^{3/} Materials only.

All except the 132 U. S. Information Agency libraries overseas supplied data on their expenditures for library materials, although 148 libraries reported zero expenditures for fiscal year 1972. Where zero expenditures are reported, costs must be assumed to have been included in systems headquarters materials expenditures. Approximately one-third of the libraries reporting zero materials expenditures were Army quasi-public libraries, many of them located overseas.

Statistics on employees were submitted by all libraries except those that responded with minimal data, although 36 reported that they had no assigned employees at all, and 83 each reported employment of less than one full-time employee in the library. Small Veterans Administration hospital and health libraries sometimes indicated sharing an employee between the two.

Three hundred seventy-one libraries (21 percent of those that responded to the question) reported that they employed no professional librarian. Almost 30 percent (111) of these libraries were quasi-public libraries of the Army and Navy. Forty-three school libraries in the United States also reported as

Table 7.--Comparison of key statistics for Federal libraries reporting substantial data,

^{1/} Does not include 401 "minimal data" libraries.

^{2/} Less than 1 percent.

employing no professional librarians, and dependent school libraries overseas reported only three professional librarians, all in the European area. Most personnel of school libraries overseas, because they are employed under Public Law 86-91, are not distinguishable by status.

A total of 11,080 full-time-equivalent employees were working in Federal libraries in fiscal year 1972. Of these, 3,209, or 29 percent, were in the 1410 series (professional librarians). Sixty-four percent of all Federal library employees were female, as were 71 percent of librarians in the 1410 series. Only 29 percent of librarians employed in Grades GS-13 and above, however, were female employees.

By Types of Federal Libraries

Of the 1,744 libraries reporting substantial data (individual and aggregate reports), one-quarter were quasi-public libraries and one-fifth were school libraries (table 7). Special or technical libraries, including health, science, and special libraries, represented 37 percent of those reporting.

survey of Federal libraries, fiscal year 1972, by type of library

4	1	2	2

^{3/}Does not include circulation for 276 of the overseas dependent schools.

Fifty-six percent of the total circulation reported was in the quasi-public libraries, mostly in the military departments. Half of all expenditures reported were made by the national libraries.

While almost two-fifths of all library employees reported were located in the national libraries, less than one-third of all professional librarians were employed there. Hospital libraries had the highest proportion of professional employees within their own staffs.

Table 8.--Comparison of key statistics for Federal libraries reporting substantial data,

Governmental organization	Number of libraries ^{1/} reporting	Percent of total libraries reporting	Percent of total collection volumes reported	Percent of total circulation reported

Other ^{4/}	5	(2)	(2)	(2)

^{1/} Does not include 401 "minimal data" libraries.

^{2/} Less than 1 percent.

By Governmental Organizations

Proportions of various key elements of data by governmental organizations are shown in table 8. Sixty-three percent of the 1,744 reporting libraries are in the Department of Defense, while another 23 percent are in independent agencies.

by government organizations; survey of Federal libraries, fiscal year 1972

Percent of total expenditures reported	Percent of total employees reported	Percent of total 1410 series employees reported	Percent of total female employees reported
\$191,125,882	11,080	3,209	7,319
6	7	8	9
50	37	32	29
(2)	(2)	(2)	(2)
(2)	(2)	(2)	(2)
8	10	13	23
32	41	36	35
9	10	17	11
(2)	(2)	(2)	(2)

^{2/} Does not include circulation for 276 of the military dependent schools overseas.

^{4/} Includes Presidential libraries and systems headquarters.

Collections of the national libraries accounted for almost one-third of all the volumes in collections reported to the survey, exceeded only by the combined collections of all of the components of the Department of Defense (42 percent of total). The Department of Defense, however, accounted for only 32 percent of total Federal library expenditures reported.

The proportion of librarians in the 1410 series to total employees is smallest in the national libraries (24.7 percent of total employees) and in the Department of Defense (25.5 percent of total employees), while independent agency libraries report the highest level of employees in this category (49.8 percent of total employees). The highest ratio of female employees (71 percent) is found in the civilian departments of the executive branch, while the national libraries employ the smallest ratio of females to total employees (51 percent).

Location of Federal Libraries

More than 30 percent of all Federal libraries identified in fiscal year 1972 were located outside the United States, while another 10 percent were in the metropolitan Washington, D. C. area (table 9).

Table 9.--Location of Federal libraries, survey of Federal libraries, fiscal year 1972

Total of percents	100	100	100	100

^{1/} Does not include 132 U. S. Information Agency overseas libraries.

Although only 10 percent of all Federal libraries that submitted data were located in the Washington, D. C. area, they accounted for more than half of all resources and almost two-thirds of all expenditures reported in the survey. Of total metropolitan area resources, the three national libraries reported: 61 percent of total volumes, 77 percent of expenditures, 72 percent of total personnel, and 63 percent of 1410 series personnel.

The distribution of resources by location is shown in table 11.

Table 11.--Distribution of Federal library resources by location, survey of Federal libraries, fiscal year 1972 (in percents)

Percentage of total	Washington, D. C. area (n=175)	Rest of U. S. (n=1,024)	Elsewhere in world (n=545)	Total (n=1,744)
Libraries responding	10	59	31	100
Volumes held	52	37	11	100
Expenditures	65	29	6	100
Employees	52	34	14	100
Employees in 1410 series	51	44	5	100
Area Federal library employees in 1410 series	28	37	10	29

The percentage of total employees who were librarians (1410 series), 28 percent, was lower in the Washington, D. C. area than in other locations in the United States. This results from the appreciably lower ratio of professionals to nonprofessionals in the national libraries, where less than one-quarter of all employees were librarians (1410 series). Other Federal libraries in the capital area showed the same percentage (37 percent) of professional personnel as is found in the rest of the United States.

The very low ratio of librarians to total library personnel elsewhere in the world is somewhat artificial, since school librarians in military dependent schools overseas are not covered by the same personnel salary schedules as are those in other Federal libraries. Only the very few regularly scheduled professional positions reported to the survey are identified. Federal libraries overseas in general, however, show a relatively low proportion of all resources.

Comparison of Special or Technical Libraries, Fiscal Years 1965 and 1972

Averages for five key data items were calculated for special or technical libraries responding to the surveys in 1965 and 1972. Comparisons are shown in table 12. While the number of special or technical libraries has almost doubled in the 7-year period, the average collection size in 1972 was only about two-thirds that of special or technical libraries reported in 1965. This suggests that continued growth of existing collections is more than balanced by the addition of a substantial number of new libraries with relatively smaller collection sizes.

The average total operating expenditure for libraries, despite their smaller average size, shows an increase of 13 percent; the average number of employees and the percentage of professionals employed in 1972, however, have both decreased. The percentage of total library expenditures for salaries remained the same for both years, at 65 percent.

Table 12.--Comparison of averages of key data items for
special or technical libraries reporting,
surveys of Federal libraries, fiscal years 1965 and 1972^{1/}

	<u>Fiscal Years</u>	
	<u>1965</u>	<u>1972</u>
Average collection size (volumes)	51,500	34,400
Average total operating expenditures	\$73,000	\$83,000
Percent of total expenditures for salaries	65	65

Percent of total employees who were professional (1410 series)	62	37

^{1/} Does not include national libraries.

CHAPTER 3

THE NATIONAL LIBRARIES

Included among Federal libraries are the three "national" libraries, although this status is "de jure" only for two of them, the National Library of Medicine (NLM), which is responsible for leadership and backup library services in the medical and allied subject areas, and the National Agricultural Library (NAL), which maintains and supplies library materials and services in agriculture and related fields. The Library of Congress (LC), while lacking legal status as a "national" library, has for many years operated as the "de facto" national library, providing services and leadership to the entire library community. Because of their relative stature among other Federal libraries, as well as their importance to all libraries in the United States, this chapter looks at these three libraries individually and in comparison with each other. Detailed statistics for the three are presented in table 13.

Approximately one-third of all books and bound periodicals reported held in Federal library collections in fiscal year 1972 were located in the three national libraries, as stated in chapter 2 and shown on tables 7 and 8. Books and periodicals, however, do not begin to represent the total collection size of these libraries, since other materials also play an important role in their value to the United States. Total holdings of the Library of Congress were calculated at 85,200,757 items in fiscal year 1972, including manuscripts, music, prints and drawings, photographs, posters, books in braille or on discs and tapes for the blind and physically handicapped, audiovisual materials including motion pictures and sound recordings, etc. The National Library of Medicine also reported more than half a million items including theses, pictures, pamphlets, etc., and holdings in motion pictures, sound recordings, and other audiovisual materials, in addition to its holdings in books and periodicals. Holdings at NAL were reported to be primarily in books and bound periodicals, but this library also holds about 100,000 microform units. Special collections of posters, maps, aerial surveys, etc., cannot be tabulated because they are not cataloged or fully indexed, although they are available for use at the library.

Expenditures of the national libraries totaled about one-half of all Federal library expenditures reported, with more than three-quarters of these national libraries expenditures reported by the Library of Congress. Costs at LC, in addition to normal library operations, include the financing of such valuable national service programs as those for the blind and physically handicapped, the National Union Catalog (NUC), Cataloging in Publication (CIP), the Machine Readable Catalog (MARC) program, the Legislative Reference Service, and many others.

Through its Regional Medical Library program, the National Library of Medicine supports the information needs of medical personnel throughout the

Table 13.--Key data items for the three national libraries,
survey of Federal libraries, fiscal year 1972

Item	Library of Congress	National Library of Medicine	National Agricultural Library	Total

United States, and its heavy interlibrary lending level reflects its value as backup resource to the program. In addition, NLM's MEDLINE and CATLINE provide valuable online bibliographic and cataloging information in biomedical areas to medical and other libraries.

The National Agricultural Library operates as the national resource library for agriculture and related fields. A machine readable record, NAL's CAIN, also provides cataloging, abstracts, and indexes of agricultural articles.

Comparing Fiscal Years 1965 and 1972

Despite the differences in items reported by the national libraries in 1965 and 1972, some comparisons, such as total volumes in collections, operating expenditures, and numbers of personnel employed can be made. All items for the three libraries showed substantial increases in the 7-year period, except librarians (1410 series) employed, where the actual number decreased in all three libraries.¹ Table 14 provides a comparison, by percentage of increase or decrease in each item, for the libraries in fiscal year 1972 compared with fiscal year 1965.

Table 14.--Percentage of increase-decrease in key data items at national libraries for 7-year period, 1965-1972

Item	Percentage of increase-decrease		
	Library of Congress	National Library of Medicine	National Agricultural Library
Total volumes in collection	20	32	20
Total operating expenditures	159	436	167
Salaries and wages	146	361	112
Library materials	284	726	413
Total employees	NA	82	54
Librarians (1410 series)	-39	-64	-21
Total professional employees (1410 and 1412 series) ^{1/}	-36	-44	-3

^{1/}Employees in the 1412 series are subject specialists.

High increases in relative expenditures for library materials are accompanied by relatively small increases in collection sizes at the national libraries, with cost increases at NLM and NAL more than 20 times the percentage of increases in collection volumes. The percentage of increase in materials expenditures at LC was well over 10 times the percentage increase in volumes held. Since book stocks represent only a fraction of items held, a good part of the increased materials costs may be assumed to be covering the procurement of other materials, as well as the inflation in prices of materials.

These increased expenditures for library materials (from 9 percent in 1965 to 13 percent of total expenditures at LC in 1972, from 2 percent to 3 percent at NLM, and from 5 percent to 9 percent at NAL) were accompanied by a decrease in percentages of total expenditures for salaries and wages in all national libraries. LC had reported 72 percent of total expenditures for salaries and wages in 1965; that percentage dropped to 68 percent in 1972. Similarly, NLM went from 52 percent of total expenditures in 1965 to 45 percent in 1972; NAL reported 72 percent in 1965 and 57 percent in 1972. The total number of professional employees declined 36 percent during this period at LC, 44 percent at NLM and 3 percent at NAL. The number of librarians (1410 series) at LC declined 39 percent over the 7-year period, 64 percent at NLM, and 21 percent at NAL. In fiscal year 1972, the percentage of all library employees who were librarians (1410 series) was 26 percent at LC, 9 percent at NLM, and 33 percent at NAL. In fiscal year 1965, 64 percent of all employees at NLM and NAL were librarians. The total number of employees (and thus the percentage of professionals) at LC in 1965 is not available.

Although the addition of nonlibrarian professionals (1412 series - information specialists) to library staffs in 1966 somewhat raises the overall percentage of professionals employed, the total professional staff at NLM in 1972 (1410 and 1412 series) represented less than 20 percent of all library employees. At NAL, the 1972 total of professional personnel represented 40 percent of entire staff, while total professional staff at LC amounted to about 27 percent of all employees.

Table 15 shows the comparative figures for volumes in collection, operating expenditures, and numbers of employees, for the three national libraries in fiscal years 1965 and 1972.

Paraprofessional library technicians (1411 series) employed in 1972 represented about 27 percent of all employees in the national libraries, although the percentages of paraprofessionals varied considerably among the three libraries. LC reported 28 percent of total staff in the 1411 series; NLM, 12 percent; and NAL, 38 percent. Slightly more females than males were reported in these positions, ranging from a low of 51 percent females at NAL to a high of 56 percent at NLM. The report for fiscal year 1965 does not provide comparable data.

Librarians (1410 series)	81	64
Information specialists (1412 series)	0	15

^{1/} Nonprofessional employees were not reported.

^{2/} 1412 series was established in 1966.

^{3/} This is not the same figure indicated in table 13 for books and bound periodicals in the NLM collection in fiscal year 1972. A check with NLM revealed that the fiscal year 1965 figure includes theses, etc., which were not included in the fiscal year 1972 figures. The comparable figures for 1972, including these items, is 1,400,000 volumes, which, for purposes of indicating relative collection growth at NLM during this period, is used here.

Sex and Grade Structure of Employees at the National Libraries

More than half of all library employees in the national libraries in 1972 were in grades GS 1-8, with another third in grades GS 9-12. By individual library, considerable variations in percentages of employees in the lower (GS 1-8) grades and the highest grades (GS 13 and above) were reported, although all had approximately one-third of their staffs in the middle grades (GS 9-12). LC reported 55 percent of employees in grades GS 1-8, NAL, 52 percent, and NLM, only 43 percent. In grades GS 13 and above, LC reported 13 percent of total employees, NAL, 16 percent, and NLM, 24 percent.

Over half of all employees of the national libraries (54 percent) were females in 1972. By library, NAL reported 55 percent, LC, 54 percent, and NLM, 51 percent female. Females also made up 50 percent of librarians (1410 series) at LC, 63 percent at NLM, and 51 percent at NAL. Among other professionals (1412 series), 56 percent of those reported at NLM were females while LC reported 42 percent; NAL had 40 percent female 1412 series employees. Despite these proportions of female employees in professional positions, a distribution of employees in the libraries by grades shows generally lower grade levels for female than for male employees within the same classification.

Only within the paraprofessional classification (1411 series) is the median grade level for employees of both sexes in all three libraries the same, although the percentage of females at this median grade is higher in all cases. NLM also shows the same median grade level for librarians (1410 series). Here again, more females fall within the median grade level, and the percentage of males above the median is substantially higher than for females. In all other cases, the median for female employees within a classification is at least one grade level below male employees in the same classification.

The median grade level range for all employees in all classifications at LC and NAL in 1972 was grades GS 7-8; for NLM it was grade GS 9. For all professional employees (1410 and 1412 series), the median grade level at LC and NAL was GS 10-11, at NLM, it was GS 12. Median grade levels for professionals in fiscal year 1965 were GS 6-9 at LC, and GS 10-13 at NAL and NLM.

CHAPTER 4

THE LIBRARIES THAT SUBMITTED DATA INDIVIDUALLY

From the total universe of 2,313 Federal libraries identified, 405 were deleted because of inability to provide substantial data for the survey. An additional 355 libraries reported aggregate data rather than individual data. Summary statistics for these libraries appear in chapter 5. Because of the stature and size of the three national libraries, their responses are analyzed separately in chapter 4. Of the remaining 1,550 libraries, 1,386 responded to the survey. Data concerning these libraries have been tabulated for analysis in five different ways, as follows:

1. By type of library (table 26)
2. By governmental organization in which the library is operated (table 26)
3. By types of library serving specific governmental organizations (table 33)
4. By size of libraries (table 37)
5. By location of libraries (table 43).

Tables and discussions in the sections of this chapter cover only the aforementioned 1,386 libraries. Since all data were not provided by all libraries, the number of libraries involved in any tabulation is indicated when it varies from the normal total.

Categories and Types of Libraries in the Federal Universe

Ten types of libraries in four categories were identified in the Federal library universe. They include:

- I. Special or technical libraries, which support mission plans with library and information services. They are subdivided as follows:
 1. Health and medical libraries (health), with collections predominantly devoted to medicine and health sciences.
 2. Engineering and science libraries (science), with collections predominantly devoted to engineering and the sciences.
 3. All other special or technical libraries (special), with collections supporting a mission plan but not predominantly devoted to the aforementioned areas.
- II. General libraries, which provide service to meet cultural, informational, educational, and recreational needs. These include:
 4. Hospital libraries, which are operated exclusively to serve

patients in Federal hospitals and are not part of a military base or post library system.

5. Penal libraries, which serve Federal prisons and correctional institutions.
6. All other general libraries (other general), which meet the definition of a general library and do not serve hospitals or penal institutions, such as the libraries serving servicemen and their dependents at military installations throughout the world.

III. Educational libraries

7. Academic or instructional libraries (academic), which serve faculty and students in Federal colleges, universities, vocational, graduate, and postgraduate schools.
8. School libraries, which provide school library services to elementary, intermediate, or secondary schools for military dependents or to schools on Indian reservations.

IV. Other Libraries

9. Presidential libraries, which specialize in the official records, memorabilia, literature, and other materials concerning the affairs of a specific President of the United States.
10. Systems headquarters, which are administrative headquarters and other service units that are not open to library users, but meet other criteria for defining a library.

Underlined terms are used to designate the relevant types in the tables which follow. More comprehensive definitions are in appendix C-II, Definitions and Instructions.

Distribution of the 1,386 libraries providing individual responses into these 10 types of libraries is shown in table 16.

Special or technical libraries represent almost half (46 percent) of the total group, with general libraries making up another 41 percent. The largest single type of libraries, "other general," with more than a quarter of the total libraries, is largely composed of the quasi-public libraries which serve military personnel and their dependents at camps, bases, and posts in the United States and abroad.

Educational libraries include the academic libraries of Indian colleges and the military academies, and the quasi-academic military advanced instructional schools, as well as the libraries of Indian schools administered by the Department of the Interior, and a few Department of Defense dependent schools in the United States.

Table 16.--Distribution of libraries reporting data individually,
by type of library; survey of Federal libraries,
fiscal year 1972

^{1/}Does not add to 100 percent because of rounding.

^{2/}Less than 1 percent.

Distribution of Libraries by Governmental Organization

More than half of all libraries providing individual responses were libraries of the Department of Defense, with 45 percent of these libraries serving the Department of the Army (table 17). Independent agencies, with 29 percent of all libraries reporting individually, had the second largest percentage. Ninety-eight percent of all Federal libraries are serving departments or agencies of the executive branch.

Table 17.--Distribution of libraries reporting data individually
by governmental organization;

Total	1,550	1,386	89	100

¹/Less than 1 percent.

Collections by Type of Library and Governmental Organization

The reported collections of libraries that provided individual responses totaled 39,227,459 volumes, including (see appendix G-II for definitions): 36,403,537 books and bound periodicals, 1,104,020 unbound periodicals (bibliographic volume), and 1,719,902 microforms. Table 18 shows the distribution of these materials by type of library.

Special or technical libraries held 59 percent of all collection items, with almost three-fifths of this total in special libraries (those not classified as health or science). The quasi-public libraries (other general) have the second largest collection volume, with almost one-quarter of total items held by this group. Holdings in microforms are generally low, with only health and science libraries reporting that they represent more than a negligible portion of their holdings.

Presidential libraries report the highest proportion of holdings in unbound periodicals. Holdings in books and bound periodicals make up by far the greatest proportion of holdings in all libraries, ranging from 79 percent of collections in science libraries to 99 percent in hospital and penal libraries. Fifty-seven percent of all document titles identified separately are held in science libraries.

Table 18.--Composition of library collections of libraries reporting individual data, by type of library; survey of Federal libraries, fiscal year 1972

Type of library	Percent of items held			Percent	Percent
	Bound volumes	Unbound periodicals	Microforms	of all libraries	of all items held
				n=1,386	n=36,227,459
<u>Special or technical</u>					
Health	87	5	8	14	5
Science	79	5	16	17	20
Special	97	2	(1)	15	34
Total				46	59
<u>General</u>					
Hospital	99	(1)	(1)	11	4
Penal	99	(1)	(1)	1	(1)
Other general	97	2	1	32	23
Total				44	27+

Systems headquarters	95	4	(1)	2	2
Total				2+	2+
All libraries	93	3	4	100	100

^{1/} Less than 1 percent.

Titles, as distinct from volumes, held in all forms of materials in the collections of the 1,301 libraries reporting this information, totaled 59,905,876. The percentage distribution of these titles was: book stock (including microforms) 32 percent, documents (including microforms) 52 percent, all other printed material (including microforms) 8 percent, audiovisual materials 2 percent, all other library materials 5 percent. The 2 percent of audiovisual materials included: motion pictures 22 percent, sound recordings 42 percent, and other audiovisual materials 36 percent.

The percentages of each of these categories held, by governmental organization, are shown in table 19. The percentage of collection held in book stock varies from less than 1 percent in the U. S. Information Agency headquarters library (special) to 100 percent of holdings in the Treasury Department libraries (also special libraries). Substantial holdings in documents are to be noted in all organizations with sizable percentages of science libraries. Highest document collection percentages are U. S. Information Agency headquarters library with 99 percent of its collection in documents, and the National Aeronautics and Space Administration libraries, reporting 93 percent of their collections in documents. The libraries of these two agencies account for 29 percent of all document holdings.

Holdings in audiovisual materials are very small in most libraries. Eight of the 28 organizational divisions reported no holdings at all; another four, negligible holdings. The Department of Housing and Urban Development, with 86 percent of its total collection in audiovisual materials, and the General Services Administration with 27 percent, were the only agencies reporting sizable audiovisual holdings. All other library materials also formed a small part of most collections, with only the Smithsonian Institution libraries (48 percent), the General Services Administration (46 percent), and the Department of Defense headquarters (26 percent) reporting more than a minimal amount of such holdings.

The number of current periodical titles held by libraries also showed substantial variations, from an average of 102 periodical titles per library in judicial branch libraries, to 2,500 titles in the library of the Federal Reserve System. Distribution of average periodical titles holdings (table 20) indicates that 11 of the 28 organizational divisions show an average number of periodical titles held in the range of 300-500 titles. Only two agencies reported average titles holdings exceeding 1,000.

Service to Users

A total of 36,828,307 items were circulated by the 1,208 Federal libraries which reported this information, and 1,143 of these libraries answered 7,586,443 reference questions for local users and an additional 210,746 queries for other libraries. More items were borrowed from other libraries through interlibrary loan (506,857 items) than were loaned (475,299 items). Circulation was highest in general (quasi-public) libraries, which accounted for almost 56 percent of items used. Special libraries did more than half of all interlibrary borrowing, while "other general" libraries did the largest volume of lending.

Department of the Army libraries accounted for almost one-third of all circulation activity, closely followed by libraries serving the Air Force. Interlibrary transactions were also heaviest for the Army libraries, although total lending substantially exceeded total borrowing.

Army libraries also answered the largest number of reference questions, although by average number of information transactions per library, Army ranked seventh, following the Department of Labor, U. S. Information Agency

Table 19.--Distribution of titles held in various types of materials, by governmental organization; libraries reporting data individually, survey of Federal libraries, fiscal year 1972

Operating Expenditures

Total expenditures of \$89,950,945 were reported by 1,309 individual libraries. Average expenditures per library reporting, by type of library, are shown in table 21. Expenditures were highest (on average) for Presidential libraries, where 85 percent of total was spent on salaries and wages. Penal libraries, with only 63 percent of expenditures for salaries, were funded at the lowest average level, with hospital and school libraries showing only slightly higher averages and median expenditures.

Table 21.--Average total operating expenditures by type of library:
libraries reporting data individually,
survey of Federal libraries, fiscal year 1972

Type of library (n=1,309)	Total expenditure per library reporting

Department of Defense libraries accounted for 61 percent of total Federal library expenditures reported by libraries providing individual responses. Almost half of this was spent by the Department of the Army. Table 22 shows average expenditures by governmental organization.

Table 22.--Average total operating expenditures by governmental organization: libraries reporting data individually, survey of Federal libraries, fiscal year 1972

Governmental organization	Total expenditure per library reporting	Percent of total expenditures reported
Legislative branch	\$97,780	(1)
Judicial branch	85,314	(1)

Civilian	74,846	17
Department of Defense	79,005	61
Independent agencies	46,803	20
Others	47,779	(1)
All libraries	68,717	100

^{1/} Less than 1 percent.

Highest average expenditures were in the legislative and judicial branches, while lowest average expenditures were reported for libraries of the Veteran's Administration (\$22,771). On average, libraries expended 66 percent of their funds on salaries and wages and 26 percent for library materials. The Environmental Protection Agency (EPA), with 41 percent of expenditures for salaries, was lowest in this category. EPA's expenditures for materials represented 52 percent of its total, the highest percentage of materials expenditures reported. Libraries of the Department of Housing and Urban Development also spent 52 percent on materials.

Eighty-eight percent of all funds spent on materials were for the purchase of print materials, with microforms and audiovisual materials each accounting for 6 percent of expenditures. Only EPA and the Department of the Treasury spent substantial proportions of their materials budgets for microforms - 34 and 26 percent, respectively. The highest proportion of materials expenditures for audiovisual materials was 16 percent by the Department of the Interior.

Congressionally appropriated funds supplied 76 percent of all money expended. By type of library, this ranged from 67 percent of funds used by "other general" libraries to 94 percent of all funds of Presidential libraries. The median percentage of funds congressionally appropriated, however, was 100 percent for all types of libraries except Presidential libraries, where the median percent was 98, and "other general," where the median was 78 percent.

Staffing of Libraries

The 1,384 libraries reporting staffing showed a total of 6,328.9 full-time-equivalent employees utilized in these Federal libraries in fiscal year 1972. Of these employees, 2,140.3 or 34 percent were librarians (1410 series) and 4,620 or 73 percent were female.

By individual library this averages 4.6 employees; the median number of employees was 2.0. Range of employment by type of library shows an average of less than one employee per penal library, to an average of 22 employees per Presidential library.

The legislative branch shows the highest average number of employees with 8.3; judicial branch libraries show the lowest average number with only 2.6 full-time-equivalent employees reported. The average number of employees reported, by governmental organization, is shown in table 23.

Table 23.--Average number of employees reported, by governmental organization; libraries reporting data individually, survey of Federal libraries, fiscal year 1972

Governmental organization	Average number of employees per library
Legislative branch	8.3
Judicial branch	2.6
Executive branch	
Civilian departments	4.8
Department of Defense	5.5
Independent agencies	2.8
Other	4.2
All libraries	4.6

Thirty-five percent of library directors had an MLS (master's degree in library science), while an additional 16 percent also had education beyond the MLS. Six libraries had directors with only a high school diploma or less. Academic libraries showed the highest levels of education of directors, while penal libraries showed the lowest percentage with an MLS or above. Table 24 lists percentages of employees who are professionals, by type of library, and table 25, by governmental organization.

^{1/}Less than 1 percent.

libraries with 29 librarians for 64 libraries showed the lowest incidence of librarians employed.

Only 8 percent of all employees of legislative branch and of boards, committees, and commission libraries were librarians, while no professionals were employed by the quasi-official agencies (table 25). Employment of librarians (1410 series) in libraries of the Department of Defense (DOD) was generally lower than average, with only 54 percent of all librarians reported by libraries reporting individual data employed at DOD, even though DOD employed 63 percent of all library employees reported. Sixty-nine percent of all information specialists were employed by DOD. The highest proportion of librarians to total staff was in the Veterans Administration, which reported that 73 percent of total library staff were librarians.

Paraprofessional library technicians (1411 series) made up 28 percent of all library employees in libraries reporting this data individually. The percentage of paraprofessionals varied substantially, however, both by type of library (table 26) and by governmental organization (table 27). Presidential libraries (1 percent of total employees), penal libraries (7 percent), and school and systems headquarters libraries (8 percent each), had the lowest levels of paraprofessional employees; science and academic libraries, each with 36 percent, had the highest levels. Fifty-seven percent of all paraprofessionals were employed in special or technical libraries.

Employees in the 1411 series also represented significant proportions of employees in all governmental branches, ranging from 9 percent of library employees in the judicial branch to 32 percent in the civilian departments of the executive branch. The Department of Defense employed nearly two-thirds of all paraprofessional employees reported.

Seventy-three percent of all library employees reported by libraries providing individual data were female, with school libraries showing 85 percent, the highest, and penal libraries, 22 percent, the lowest proportion. No females were reported employed by the U. S. Information Agency headquarters library or the Federal Reserve System library; only 43 percent of employees at the Atomic Energy Commission (AEC) libraries were female. The Environmental Protection Agency libraries, with 88 percent, had the highest proportion of female employees.

Employment of female librarians (1410 series) ranged from 33 percent in penal libraries to 86 percent in "other general" libraries. Three agencies reported no female librarians. They were: U. S. Information Agency headquarters, the Federal Reserve System, and boards, committees, and commissions. In other agencies, the lowest rate of female professional employment was 41 percent in AEC. All of the librarians in the legislative branch (2), Department of State (10), Department of the Treasury (9), and Department of Labor (15.8), were female. Fifty-four percent of all information specialists were also female.

Distribution of Library Employees by Grade and Sex

More than half of all library employees were in the salary grades GS 1-8, and only 3 percent were in grades GS 13 and over. About one-third of employees had grades of GS 9-12. Substantially higher percentages of total female employees than of male employees were found in the lower grade structures. The median reported grade level for female employees in libraries reporting data individually was in grades GS 1-6, while the median level for male employees within the grade structure was GS 7-8. Almost 80 percent of female employees were reported in grades of GS 9 or below, while less than 70 percent of male employees were in these grades. No female employees were reported in grades above GS 15, and less than one percent were reported above grade GS 13. Over 3 percent of male employees were in grades above GS 13, including eight employees in grades GS 16 and above.

General libraries tended to have the highest percentage of employees (68 percent) in the lower grades (GS 1-8), although penal libraries, with 7 percent had the lowest proportion in this range. The largest percentage of the highest grade levels (GS 13 and over) were in Presidential and systems headquarters libraries, with 13 and 12 percent respectively. School libraries and penal libraries reported no employees with grades above GS 11. Hospital libraries had no employees above grade GS 12. Only one employee in other general libraries was reported in the grades GS 13 and above. Table 28

^{2/}Less than 1 percent.

shows the percentage distribution of graded employees in these three groupings by type of library. Information on salary ranges of ungraded employees is not available.

Most governmental organizations reported about half or more of their library employees within grades GS 1-8. Quasi-official agencies, with only 11 percent of their employees in graded positions, reported all of them in this category; legislative branch had 16 of the 28 percent of graded employees reported in the lower grades. The Department of the Army, with 66 percent of employees in grades GS 1-8, had the highest percentage at this level.

Employees in midgrade (GS 9-12) levels ranged from 12 percent of legislative branch employees to 51 percent of Veterans Administration library personnel. The 15 percent of Department of State employees in grade GS 13 and over was the highest percentage in the upper grades. The legislative and judicial branches and the Department of Agriculture reported no library employees above GS 12.

The percentage distribution of library employees by grade level and governmental organization is displayed in table 29.

Summary of All Survey Data Items

Table 30, which follows, provides summaries of all data items for libraries reporting individually, by types of library, and by governmental organization.

1/ DATA REPORTED IN THIS TABLE ARE ONLY FOR LIBRARIES THAT SUBMITTED DATA INDIVIDUALLY, EXCLUDING THE THREE NATIONAL LIBRARIES (WHICH ARE TREATED SEPARATELY IN CHAPTER 3) AND THE GROUPS OF LIBRARIES THAT PROVIDED AGGREGATE RESPONSES (COVERED IN CHAPTER 5). A SUMMARY OF DATA FOR ALL FEDERAL LIBRARIES REPORTING IS FOUND IN CHAPTER 2, TABLE 8.

Types of Libraries Serving Specific Governmental Organizations

The preceding sections of this chapter have discussed numbers of libraries and proportions of total collections, services, and staffs distributed among the 10 types of libraries and among the 28 governmental organization divisions covered by the 1972 survey. This section deals with distribution of categories and types of libraries within the specific governmental organizations identified and compares the average collection sizes and expenditures of these types within the various organizations.

Table 31 lists the types of libraries serving each of the three branches of government. Libraries serving the legislative and judicial branches are all in the special or technical category; specifically, in the type designated as "special." Libraries in segments of the executive branch represent all 10 of the types of libraries identified within the Federal library universe.

Sixty-three percent of all libraries serving civilian executive departments which reported individual data were special or technical libraries, as were 60 percent of those serving independent agencies. Second in number in civilian executive departments, with almost one-quarter of the total, were educational libraries. These are primarily in Indian schools administered by the Department of the Interior. General libraries, primarily the quasi-public libraries which serve military members and their dependents in all parts of the world, accounted for 54 percent of all Department of Defense libraries; special or technical libraries made up another third. The number of quasi-public hospital libraries serving patients in Veteran's Administration hospitals raised general libraries to the second ranking type in independent agencies.

Tables 32, 33, and 34 show the specific organizations (of the 28 governmental organization divisions identified) which are served by the various types of special or technical, general, and educational libraries.

Two-thirds of all health libraries were in the Veterans Administration, while almost a quarter served hospitals in all branches of the Department of Defense. Health libraries serving the Department of Health, Education, and Welfare include the libraries of the National Institutes of Health complex in the Bethesda-Rockville area, as well as libraries of the Food and Drug Administration, Center for Disease Control, and the U. S. Public Health Service hospitals.

Science libraries primarily serve the Department of Defense, where 58 percent of them are located. An additional 12 percent are libraries of the Department of the Interior serving facilities as varied as the Bureau of Mines, Patuxent Wildlife Research Center, Energy Resources Laboratory, Center of Astrogeology, and the Bureau of Reclamation. Nine percent serve Department of Commerce installations across the country, including the U. S. Patent Office, National Oceanographic Data Center, and National Climatic Center.

Table 31.--Categories of libraries serving the three branches of government: libraries reporting data individually, survey of Federal libraries, fiscal year 1972

^{1/} Less than 1 percent.

All of the governmental organizations reported some special libraries, ranging from the libraries of the Senate and House of Representatives, the Supreme Court, and the General Accounting Office, to the Museum of the Plains Indian and the Woodrow Wilson International Center for Scholars.

General libraries are primarily quasi-public libraries serving military personnel and their dependents at camps, bases, or posts around the world, and specific user groups such as hospital patients and prisoners confined in Federal penal institutions (table 33).

Educational libraries serve such academic and quasi-academic and advanced instructional institutions as the service academies, colleges, and schools, Indian colleges, Howard University, Gallaudet College for the Deaf, the police and FBI academies, and the U.S. Merchant Marine Academy. School libraries serve Indian schools of the Department of Interior, and dependent schools located on installations of the Department of Defense in the United States. Table 30 lists the organizations served by academic and school libraries.

Libraries serving schools operated by the departments shown in table 34 do not include the 289 dependent school libraries overseas for children of military personnel in all parts of the world. Only aggregate data were reported for the three systems, which include 19 percent Air Force, 76 percent Army, and 6 percent Navy school libraries. Summary statistics for these systems are provided in chapter 5.

"Other" libraries include the Presidential libraries (n=6), all of which function under the General Services Administration, and systems headquarters (n=45), 89 percent of which are in the Department of Defense. Small numbers of systems headquarters libraries are also distributed among the Department of Commerce, Veteran's Administration, National Aeronautics and Space Administration, and other independent agencies.

Systems headquarters and other service units not open to the public, such as technical processing centers, were asked to report only selected items. Of the 40 systems headquarters in the Department of Defense, 28 were administrative offices for the system; the other 12 were systemwide technical services centers or provided some other type of systemwide support. The administrative offices generally have only small office collections of books and other materials, whereas the technical services centers have collections ranging from 5,000 to over 130,000 books for distribution and redistribution within the system. Nine of the 12 service or support centers are located outside the continental United States. Most of the new materials added to the system libraries are received in the centers, cataloged, and processed prior to issue to the system libraries. All but 5 of the 45 systems headquarters and service/support centers report one or more staff in the 1410 series. Systems vary considerably in organization, size, and functions as indicated by expenditures. For example: Funds expended for salaries range from \$12,150 to \$127,389 (nine reported zero); funds for library materials varied from zero to a low of \$100 to a high of \$986,000; total expenditures ranged from zero to a low of \$1,560 to a high of \$2,127,389.

Average Collection Size of Various Types of Libraries by Governmental Organization

Average collection size varied considerably both with the type of library and within a type, by the governmental organization served (table 35). Libraries of the Environmental Protection Agency (EPA) had the smallest average collections in health and in special libraries, while science libraries averaged smallest in the Department of Health, Education, and Welfare (HEW). Veteran's Administration (VA) libraries also tended to be smaller on average than other libraries of the same types in other agencies.

Penal libraries and school libraries were the types with the smallest average collections. School libraries in the Department of the Navy (Navy) had appreciably smaller average collections than those in the Department of the Army, Air Force, or Interior school libraries.

For agencies reporting more than one type of library, collections in special libraries averaged highest in Department of Defense headquarters; Departments of the Navy, Justice, Interior, and HEW; the Smithsonian Institution; VA; and the General Services Administration (GSA). The largest average collections in the Departments of the Air Force, the Army, Commerce, and Transportation were in academic libraries, while the Department of Agriculture and the Atomic Energy Commission reported their largest average collections in science libraries.

Average Expenditures of Governmental Organizations, by Type of Library

In most agencies, average library expenditures correlated positively with the proportion of total collection in a type of library (table 36). Several exceptions may be noted:

- Navy, with special library collections averaging almost three times the average collection size of its academic libraries, spent nearly five times its average special library expenditures on academic libraries.

- Transportation, with its largest average collection size in academic libraries, spent the largest average amount of money on science libraries.

- The Smithsonian Institution's highest average expenditures were on science libraries, but largest average collection sizes were in special libraries.

- EPA's average science collection was nearly double the size of its average special library collection, but expenditures for science collections trailed those for special library collections by about 43 percent.

- GSA spent an average of almost three times as much on Presidential libraries as on special libraries, although special library collections averaged about four times larger.

Summary of Selected Survey Data Items

Table 37, which follows in five parts, provides detail of selected survey areas for the libraries that reported data individually, by type and specific governmental organization. For this table and succeeding summary tables, 15 key items have been tabulated. These items and their locations in the survey questionnaire (appendix C-I) are:

Volumes of books and bound periodicals (Q3, line 03) ^{1/}
Number of periodical titles received (Q5)
Titles in book stock (Q4, line 01)
Titles of documents (Q4, line 02)
Number of circulation transactions (Q6)
Interlibrary loan transactions lent
Interlibrary loan transactions received
Operating expenditures: total (Q9, line 07)
Operating expenditures: salaries and wages (Q9, line 01)
Activities: bibliographies prepared for persons outside agency
(Q10, line 03, columns f and g)
Activities: translations prepared for persons outside agency
(Q10, line 04, columns f and g)
Activities: abstracts prepared for persons outside agency
(Q10, line 05, columns f and g)
Activities: publications prepared for persons outside agency
(Q10, line 06, columns f and g)
Number of employees: 1410 series (Q12, sum of columns b+c, line
10)
Number of employees: total (Q12, sum of columns l+m, line 12)

^{1/}Q = question.

1/ DATA REPORTED IN THIS TABLE ARE ONLY FOR LIBRARIES THAT SUBMITTED DATA INDIVIDUALLY, EXCLUDING THE THREE NATIONAL LIBRARIES (WHICH ARE TREATED SEPARATELY IN CHAPTER 3) AND THE GROUPS OF LIBRARIES THAT PROVIDED AGGREGATE RESPONSES (COVERED IN CHAPTER 5). A SUMMARY OF DATA FOR ALL FEDERAL LIBRARIES REPORTING IS FOUND IN CHAPTER 2, TABLE 6.

Size of Federal Libraries, Fiscal Year 1972

The median Federal library had a collection of 6,000-12,000 volumes. Distribution of libraries by size of collection (table 38) shows that over half of all libraries reporting cluster in the range of 6,000-30,000 volumes.

Table 38.--Distribution of Federal libraries by size of collection;
libraries reporting data individually,
survey of Federal libraries, fiscal year 1972

Collection size of libraries	Number of volumes	Number of libraries reporting size	Percent of all reporting libraries ^{1/}
Smallest	Under 3,000	176	13
Small	3,000-5,999	255	19
Medium small	6,000-11,999	339	25
Medium large	12,000-29,999	362	27
Large	30,000-99,999	172	13
Largest	Over 100,000	58	4
		1,362	

^{1/} Does not total to 100 percent because of rounding.

Size by Type of Library

Although the average number of volumes in all Federal libraries was 26,728, considerable variation occurs when size is distributed by type of library as shown in table 39. It is noteworthy that the average collection size falls within the range of the median for its type in only four types of libraries: other general, Presidential, school, and hospital.

All of the four categories of libraries were represented in all size ranges, but no libraries of the types Presidential, hospital, penal, or school qualified for the group of largest libraries (more than 100,000 volumes). All school libraries reporting were within the ranges below 30,000 volumes. No Presidential libraries reported collections within the medium-small range (6,000-11,999 volumes).

One-third of the largest libraries were special libraries, while another 26 percent were science libraries, followed by academic libraries (21 percent).

The largest percentage of the libraries in the under 3,000 volumes group (smallest libraries) were health libraries. Hospital libraries accounted for the largest percentage (27 percent) of libraries in the small category (3,000-5,999 volumes), closely followed by health libraries (25 percent). Hospital libraries also made up 22 percent of total libraries in the medium-small range (6,000-11,999 volumes), with other general libraries accounting for an additional 22 percent. Other general libraries also constituted over half (54 percent) of all libraries in the medium-large range (12,000-29,999 volumes), and 38 percent of all large libraries (30,000-99,999 volumes).

Table 39.--Average collection size by type of library;
libraries reporting data individually,
survey of Federal libraries, fiscal year 1972

Type of library	Average number of volumes	Median collection size (volumes)	Percent of all volumes in Federal libraries
Special	63,587	6,000-11,999	35
Academic	63,545	12,000-29,999	10
Science	29,290	6,000-11,999	17
Systems headquarters	27,372	6,000	2
Other general	23,563	12,000-29,999	24
Presidential	21,101	12,000-29,999	1
School	8,517	6,000-11,999	1
Health	8,356	3,000-5,999	5
Hospital	8,271	6,000-11,999	4
Penal	7,421	3,000-5,999	1

The percentage distribution of libraries by type and size is shown in table 40. The largest percentages of special or technical libraries were in the small collection ranges (under 6,000 volumes) while most general libraries had collections in the 12,000-29,999 volume range. The largest percentage of educational libraries were in the 6,000-12,000 volume range, although academic libraries had the highest percentage (20 percent) of libraries with collections of more than 100,000 volumes. Ten percent of special libraries also had collections in the largest range. More than one-third of "other" libraries were in the group of smallest libraries.

Table 40.--Percentage distribution of libraries by collection size and type of library; libraries reporting data individually, survey of Federal libraries, fiscal year 1972

1/ DATA REPORTED IN THIS TABLE ARE ONLY FOR LIBRARIES THAT SUBMITTED DATA INDIVIDUALLY, EXCLUDING THE THREE NATIONAL LIBRARIES (WHICH ARE TREATED SEPARATELY IN CHAPTER 3) AND THE GROUPS OF LIBRARIES THAT PROVIDED AGGREGATE RESPONSES (COVERED IN CHAPTER 5). A SUMMARY OF DATA FOR ALL FEDERAL LIBRARIES REPORTING IS FOUND IN CHAPTER 2, TABLE 6.

Location of Federal Libraries, Fiscal Year 1972

For this study, Federal libraries were grouped geographically according to U. S. Department of Health, Education, and Welfare regions to indicate location. States included in the 10 regions are as follows:

Region I

Connecticut
Maine
Massachusetts
New Hampshire
Rhode Island
Vermont

Region II

New Jersey
New York
Puerto Rico
Virgin Islands

Region III

Deleware
District of Columbia
Maryland
Pennsylvania
Virginia
West Virginia

Region IV

Alabama
Florida
Georgia
Kentucky
Mississippi
North Carolina
South Carolina
Tennessee

Region V

Illinois
Indiana
Minnesota
Michigan
Ohio
Wisconsin

Region VI

Arkansas
Louisiana
New Mexico
Oklahoma
Texas

Region VII

Iowa
Kansas
Missouri
Nebraska

Region VIII

Colorado
Montana
North Dakota
South Dakota
Utah
Wyoming

Region IX

Arizona
California
Hawaii
Nevada
American Samoa

Region X

Alaska
Idaho
Oregon
Washington

In addition to these 10 regions, libraries in the metropolitan Washington, D.C. area were separated from the rest of region III to form a "Washington, D.C. area" bloc (no data for this group are included within region III figures), and libraries located outside the United States and its territories were classified within the location group "elsewhere in the world." These

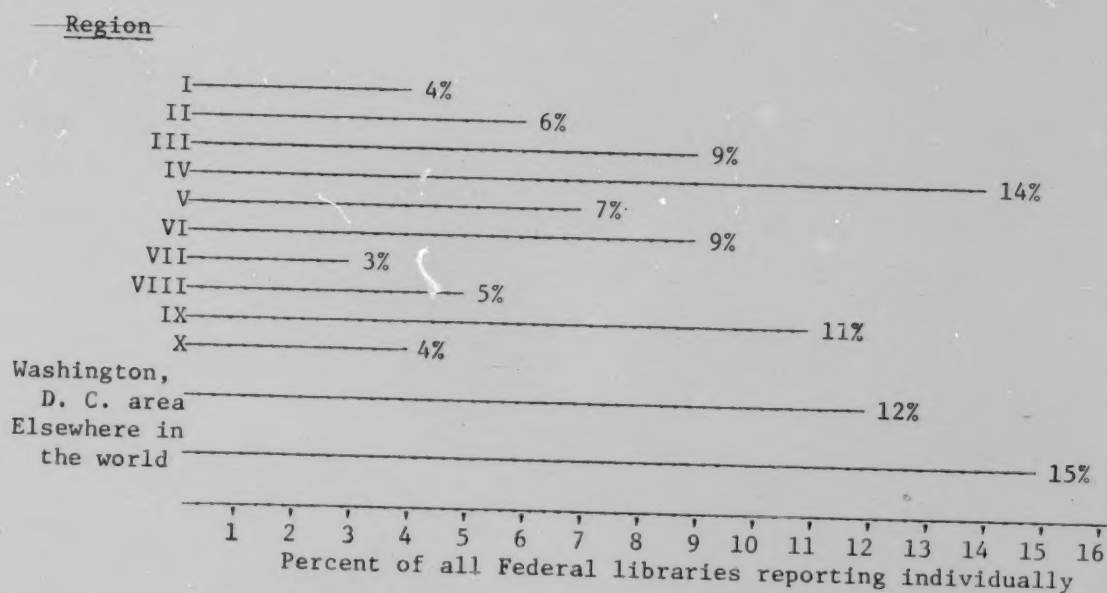

12 location regions are used in this section to show geographic distribution of Federal libraries reporting data individually, and their resources, expenditures, and services.

Distribution of Libraries by Region

The highest percentage of Federal libraries in the United States was in region IV, the Southeastern States. The smallest percentage was in region VII, the Plains States. Fifteen percent of all Federal libraries reporting data individually were located outside the United States. Approximately one-seventh of all libraries located within the continental United States were in the Washington, D. C. metropolitan area. Percentage distribution of Federal libraries throughout the world is shown in figure 1.

Figure 1

Distribution of Federal libraries by region;
libraries reporting data individually,
survey of Federal libraries, fiscal year 1972

Not all types of libraries were found in all regions. Presidential libraries were in regions I, II, VI, and VII only. There were no Federal penal libraries reported in the Washington, D. C. area, region II, or "elsewhere in the world." School libraries were reported only in regions II, IV, VI, VIII, IX, and X. There were no systems headquarters libraries in regions I or X.

Distribution of Resources by Region

Almost one-third of all books and bound periodicals in collections of Federal libraries reporting data individually were in the Washington, D. C. area. Two-thirds of these volumes were in special libraries. The second largest collection location was region IX with 17 percent of total volumes, of which 61 percent were in special libraries. Table 42 shows the percent of total volumes in books and bound periodicals in each region, as well as the type of library holding the largest percentage of total volumes in the region.

Table 42.--Percentage distribution of bound volumes by region;
libraries reporting data individually,
survey of Federal libraries, fiscal year 1972

III	8	Academic	41
IV	10	Other general	43
V	4	Science	39
VI	6	Other general	44
VII	2	Other general	35
VIII	4	Other general	24
IX	17	Special	61
X	1	Other general	35
Washington, D. C. area	31	Special	67
Elsewhere in the world	10	Other general	81

Library Personnel by Region

Thirty-four percent of all library personnel reported by individual libraries in the survey were librarians (1410 series). Regions I and X reported the highest proportions of professional employees in relation to total resources, while region IX had the lowest level. Staffing levels in relation to total resources for total employees appeared to be lowest in the Far West

(region IX) and highest in the Plains States (region VII). Table 43 shows the proportions of total resources, employees, and professional librarians, by region.

Table 43.--Staffing of libraries in relation to resources, by region;
libraries reporting data individually,
survey of Federal libraries, fiscal year 1972

Region	Percent of all libraries reporting	Percent of total resources ^{1/}	Percent of total employees	Percent of all 1410 series employees
I	4	3	4	6
II	6	4	5	7
III	9	8	10	10
IV	14	10	13	12
V	7	4	4	5
VI	9	6	8	8
VII	3	2	3	3
VIII	5	4	4	4
IX	11	17	9	9
X	4	1	1	2
Washington, D. C. area	12	31	25	27
Elsewhere in the world	15	10	14	7
Totals	(2)	100	100	100

^{1/}Total books and bound periodicals reported in region.

^{2/}Does not total 100 percent because of rounding.

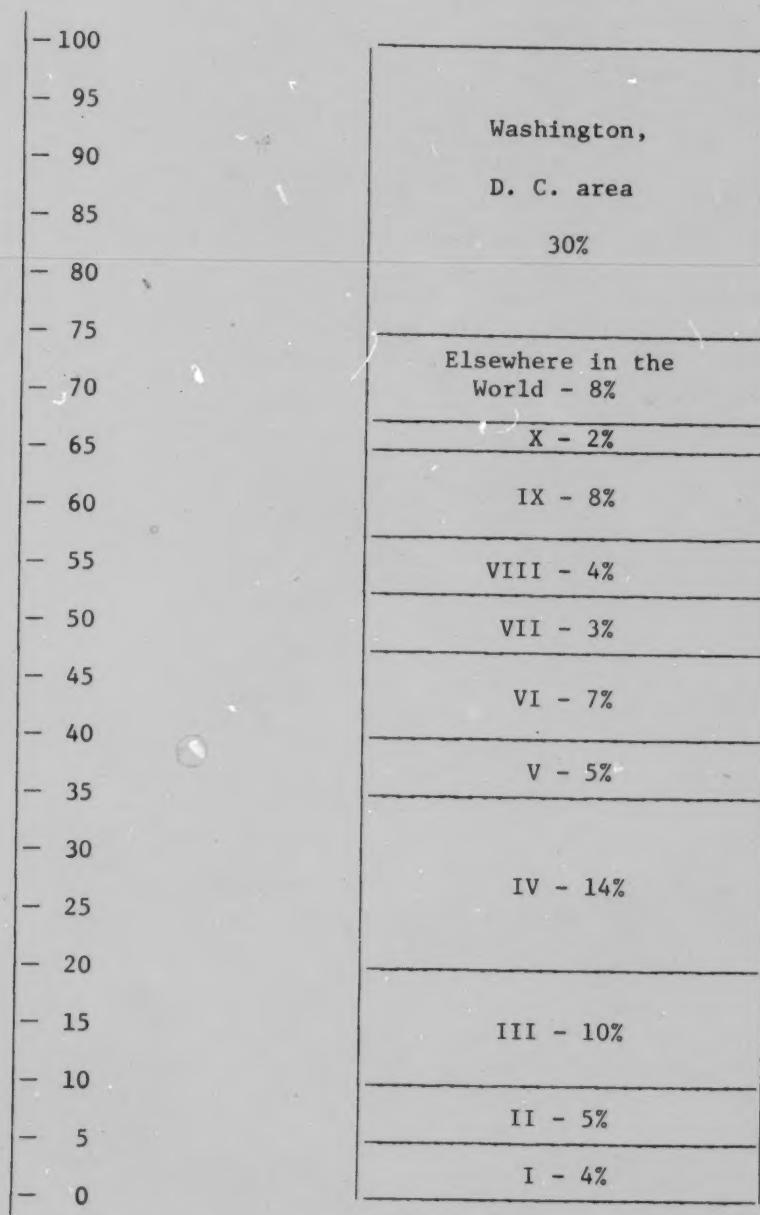

Library Expenditures by Region

Almost one-third of all Federal library expenditures for libraries reporting data individually were incurred in the Washington, D. C. area, where 12 percent of these libraries held 31 percent of all the Federal library resources reported. Figure 2 shows the percentage distribution of expenditures by region.

Figure 2

Percentage distribution of library expenditures by region;
libraries reporting data individually,
survey of Federal libraries, fiscal year 1972

Percent

Use of Resources by Region

A total of 36,828,307 items were circulated in all regions for an average circulation per bound volume reported of 1.01. Considerable difference may be noted in use of materials at the various types of libraries. Ratios of average circulation per bound volume^{5/} held, by type of library, are shown in table 44.

Table 44.--Ratio of circulation to collection size (volumes) by type of library; libraries reporting data individually, survey of Federal libraries, fiscal year 1972

Type of library	Ratio of average circulation to volumes held
Health	.952 : 1
Science	.484 : 1
Special	.273 : 1
Hospital	2.022 : 1
Penal	.910 : 1
Other general	2.490 : 1
Academic	.550 : 1
School	1.752 : 1
Presidential	.035 : 1
Systems headquarters	.996 : 1

Hospital and other general libraries show the highest rate of materials use, with school libraries also reporting a high use rate. Regions where the largest proportion of the total collection is in other general libraries reflect this higher use of materials. All of these regions report substantially higher ratios of circulation to holdings than do regions reporting heaviest holdings in special or technical libraries (table 45). The highest rate of use is found in libraries overseas (elsewhere in the world) where collections in other general (quasi-public) libraries represent 81 percent of all holdings reported.

^{5/} Since all libraries did not report total holdings of all types of library materials, ratios are based on circulation versus collection size defined as bound volumes only.

Table 45.--Ratio of circulation to volumes held, by region and type of dominant collection: libraries reporting data individually, survey of Federal libraries, fiscal year 1972

Region	Dominant collection ^{1/}	Ratio of circulation to volumes
I	Science	.747 : 1
II	Academic	.914 : 1
III	Academic	1.041 : 1
IV	Other general	1.841 : 1
V	Science	.931 : 1
VI	Other general	1.820 : 1
VII	Other general	1.306 : 1
VIII	Other general	1.618 : 1
IX	Special	.543 : 1
X	Other general	1.387 : 1
Washington, D. C. area	Special	.272 : 1
Elsewhere in the world	Other general	2.605 : 1

^{1/} Dominant collection is the type of library with the largest percentage of regional holdings.

Interlibrary Transactions by Region

All types of libraries engaged in some interlibrary lending and/or borrowing transactions, although libraries of the Presidential and penal types were least likely to do so. Materials were borrowed from and loaned both to other Federal and to non-Federal libraries. Rates of lending and borrowing varied considerably between regions. These rates, calculated in terms of relation between borrowing or lending and collection size defined as bound volumes held, are listed in table 46. Ratios of lending to borrowing are also shown.

The lowest borrowing rates were in regions VIII and IX, with region VIII also showing the highest lending rate (more than five items loaned for each item borrowed). Only three of the regions, II, IV, and VIII, were net lenders. The highest rate of borrowing took place in region X where almost 10 items were borrowed for each item loaned. This region is also the lowest

in total resources. Only one of the net lending regions (region IV) held a substantial proportion of total resources, while the largest net lending region (region VIII) held a relatively small percentage of total resources.

Table 46.--Rates of borrowing and lending in interlibrary transactions, by region; libraries reporting data individually, survey of Federal libraries, fiscal year 1972

Region	Percent of total volumes held	Interlibrary loans per volume held		Ratio of lending to borrowing
		Borrowing	Lending

Summary of Key Survey Items by Region

In the series of summary tables which follow, table 47 provides a summary of key data items by region; tables 47A through 47E summarize 16 data items by type of library and region, and table 47F presents a breakdown of the number and collection size of libraries of each type in each region.

Table 47.--Summary of key data items by region; libraries reporting data individually,

CHAPTER 5

THE LIBRARIES THAT PROVIDED AGGREGATE RESPONSES

Data for 355 of the libraries in the Department of Defense were provided in aggregates rather than for individual libraries. These reports included the Army Library in the Pentagon; 65 Army Special Services libraries located in Korea, Thailand, and Vietnam; and 289 military dependent school libraries overseas. Data for these 355 libraries are summarized in table 48, and detailed in tables A-I and A-II, appendix A.

The Army Library (Pentagon)

Operating expenditures for library materials, as reported in the questionnaire submitted by the Army Library included \$700,000 for materials purchased for the Army field law library system. Responsibility for these 269 libraries (also known as the Judge Advocate General, or JAG, libraries) is divided; responsibility for purchase, storage, and supply of materials as needed, is vested in the Army Library, while housing and staff are provided by the using office. Most of these libraries are serviced on a part-time basis by a clerk or secretary.

Data for the Army Library are included in table 48, and may also be found in tables A-I and A-II in appendix A. Statistics on book storage for the JAG library system are not included in the report.

The Army Special Services Libraries in Korea, Thailand, and Vietnam

Aggregate data, rather than individual reports, were also supplied for 65 Army Special Services libraries. They include 43 libraries in Korea, 7 in Thailand, and 15 in Vietnam.

Averages for libraries in each of the three areas show that the largest average collection size and number of employees were in Vietnam. Highest average total operating expenditures for fiscal year 1972 were also reported for Vietnam. This area reported the lowest average number of items circulated, as shown in table 49. However, no utilization records were kept for the large quantities of paperback books distributed there.

Seventy-three percent of the 30 librarians (1410 series) employed in Korea, Thailand, and Vietnam were female. However, in Korea, 85 percent of total Federal library employees were male, a reversal of the usual male-female employment ratios, and the result of hiring primarily male local nationals as support staff.

Table 48.--Summary of key data items for Department of Defense libraries that provided aggregate responses, survey of Federal libraries, fiscal year 1972

Item	Army Library	Army Special Services libraries (Korea, Thailand, Vietnam)	Military dependent school libraries overseas	Total - all libraries providing aggregate data

1411 series	14	104	0	118
1412 series	0	0	0	0
All other	5	83	376	464

^{1/} Data on book titles, document titles, other print titles, audiovisual titles, periodical titles, circulation, and salaries and wages are for 13 Navy school libraries in the Atlantic area only.

^{2/} Includes data on expenditures for library materials for 269 Army field law (JAG) libraries.

^{3/} Recordings only.

^{4/} Includes \$700,000 in expenditures for the JAG libraries.

Table 49.--Comparisons of Army Special Services libraries providing aggregate responses, survey of Federal libraries, fiscal year 1972

Item	Korea	Thailand	Vietnam
Number of libraries	43	7	15
Average collection size (volumes)	8,400	6,100	11,000
Average circulation (items) ^{1/}	27,000	55,300	4,600
Average operating expenditure	\$21,000	\$12,800	\$154,200
Average number of employees	3.0	1.4	5.9
Average number of professionals	0.5	0	0.6

^{1/}Includes interlibrary lending transactions.

Military Dependent Schools Overseas

The 289 military dependent schools overseas include: 13 Navy dependent schools in the Atlantic area, 55 Air Force dependent schools in the Pacific area, and 221 Army dependent schools in the European area. A comparison of averages for the three areas is shown in table 50.

Table 50.--Comparisons of military dependent school libraries overseas, libraries providing aggregate responses, survey of Federal libraries, fiscal year 1972

Item	Area		
	Atlantic	European	Pacific
Number of libraries	13	221	55
Average collection size (volumes)	7,000	7,000	11,000
Average number of employees	(1)	1.3	1.3
Average expenditures for materials	\$6,500	\$2,400	\$3,600

^{1/}Less than 1

The number of items circulated, and the number of titles of books, documents, periodicals, other print materials, and audiovisual materials, were provided for the 13 Navy dependent school libraries in the Atlantic area only (data in table 48).

Most librarians employed in the dependent school systems overseas are employed under Public Law 86-91 (Defense Department Overseas Teachers Pay and Personnel Practices Act), and the total number of professional librarians in these systems was not ascertainable to the survey. The three librarians in the European area reported in the 1410 series were employed under the Federal library employees classification schedule.

Ninety-seven percent of all employees in the dependent school libraries were female. There were 171 local nationals employed as library clerks in the European area.

United States Information Agency (USIA) Libraries Overseas

Libraries of the USIA overseas were deleted from the Federal library survey universe because complete data on them were not available. Statistics provided by the USIA for its 132 worldwide libraries and 30 reading rooms included only collection sizes and circulation statistics for the seven geographical areas served. These are tabulated in table 51.

Table 51.--Collection size and circulation for libraries and reading rooms of the United States Information Agency overseas, survey of Federal libraries, fiscal year 1972

Area	Number of centers	Number of reading rooms	Number of books	Circulation (items)
East Asia and Pacific	31	4	185,611	369,000
Africa	35	10	201,045	333,417
Near East and North America	11		139,362	319,591
South Asia	12	5	248,901	950,612
Latin America	12	6	195,415	768,712
West Europe	26	4	468,604	941,156
Soviet Union and East Europe	5	1	38,592	67,098
Total	132	30	1,477,530	3,749,586

Ratios of circulation to collection size (volumes held) presented in table 52 show that South Asia and Latin America had circulation rates almost double those of most other geographical areas. The largest average collection sizes were in West Europe and South Asia. Africa had the largest number of service points, but average collection size and circulation were smallest there. Comparisons of collection sizes and circulation volume and ratios, by geographical area, are given in table 52.

Table 52.--Comparisons of collection size and circulation of USIA libraries overseas, by geographical area: survey of Federal libraries, fiscal year 1972

Area	Number of service points	Average collection size (books)	Average circulation (items)	Ratio of circulation to collection
East Asia and Pacific	35	5,300	10,500	2.0 : 1
Africa	45	4,500	7,400	1.6 : 1
Near East and North America	11	12,700	29,000	2.3 : 1
South Asia	17	14,600	56,000	3.8 : 1
Latin America	18	10,900	42,700	3.9 : 1
West Europe	30	15,600	31,400	2.0 : 1
Soviet Union and East Europe	6	6,400	11,200	1.7 : 1

CHAPTER 6

GENERAL COMMENTS ON TRENDS IN FEDERAL LIBRARY DEVELOPMENT

The survey of Federal libraries, fiscal year 1972, reported substantial data on collections, services, personnel, and expenditures, for the wide variety of types of libraries serving agencies of the Federal Government. Because of this depth and scope, only limited comparability exists with earlier studies of Federal libraries, which considered only the types of special or technical libraries (including national libraries) serving Federal agencies.

A comparison of the status of these special or technical libraries in 1965, the date of the last survey, and in 1972, suggests that while their number is increasing, the average number of volumes held by them tends to be smaller. This is not to be taken as a finding that library collection sizes have decreased, but rather as an indication that new libraries have added relatively smaller collection sizes to the Federal array.

No data before 1972 are available for the universe of other (general, educational, etc.) types of Federal libraries. A comparison of the proportions of types of special or technical libraries serving the Federal community in 1965 and in 1972, however, well illustrates the continuous shifting and development in Federal libraries necessary to maintain relevance to Federal information needs. Since the collection of data in this survey, new libraries have been added to the universe of Federal libraries, and some of the libraries included here have moved or been closed as need for them has shifted or ceased. Such mutability must be recognized as a permanent factor in Federal library development.

As the Federal Government organizes programs and offices to meet new and rising national and international needs and interests, Federal libraries will be established to support such activities. These new libraries, in most cases, will continue the growth in numbers of libraries with limited collections and staffs.

Accepting trends in special or technical libraries (as evidenced by comparisons of data collected in 1965 and in 1972) as indicative of trends throughout the Federal library universe, we note that even with smaller average collection sizes, average expenditures of the libraries showed substantial gains over the 7-year period. As a result of inflationary trends, it may be expected that libraries will continue to experience increased expenditures for library materials with relatively smaller increases in collection size.

For most special or technical libraries, the average percentage of total expenditures for salaries and wages remained the same. Among national libraries alone, however, the percentage of total expenditures for salaries and wages declined about 7 percent in the 7-year period. In all cases, salary and wage expenditures represented greatly increased total payment to a smaller average number of support staff and to a substantially diminished average percentage of professional librarians. Some of this decline in professional librarians employed was compensated by employment of a small number of information (subject) specialists, a classification which was added during the 1965-1972 period. It is expected that the recruiting of subject specialists in place of librarians will continue to increase.

In the national libraries, some increase in the number of computer specialists may also be anticipated as these libraries extend their use of computer technology. As for the other Federal libraries, however, the trend toward use of various data base services rather than development of in-house computer expertise, may limit increased recruitment of these specialists. The number of professional librarians in Federal libraries probably will not expand significantly in the future.

Growing emphasis on continuing education programs supported by Federal funding may be expected to increase the formal and informal training programs in Federal libraries. In addition, Federal library management and librarians will respond to agency career development programs and to the individual professional's education needs, especially as they relate to providing improved service to agency personnel. There will be a continuing effort to train and develop library technicians and paraprofessionals. In some areas, opportunities will develop for paraprofessionals with Federal library experience to advance to professional positions through agency training and career programs.

Given the impact of cooperative agreements and the trend toward building networks throughout the country, it is likely that the Federal library community will also move further in that direction.

A continuing dilemma for Federal librarians will be to maintain service without an appreciable increase in staff, in response to agency management's emphasis on keeping library costs to a minimum. However, more effective library service provided to a growing clientele may be recognized by agency management as worthy of increased support.

APPENDIX A

INDIVIDUAL LIBRARY LISTINGS

SURVEY OF FEDERAL LIBRARIES, FISCAL YEAR 1972

APPENDIX A

INDIVIDUAL LIBRARY LISTINGS

Table A-I provides 20 important data items for all reporting libraries. The listings are grouped by governmental organization and, within governmental organization, by location. Those libraries located in the Washington, D. C. metropolitan area are listed first (D. C. first, then Maryland suburbs followed by Virginia suburbs); libraries elsewhere in the United States are listed by their location in one of the 50 States; the libraries located in foreign countries (listed by Army post office (APO) numbers) come at the end. If there are more than one library in the same governmental organization and in the same location (D. C., Maryland suburbs, Virginia suburbs, a State, or foreign country), the libraries are grouped by type (health, general, academic, etc.).

Table A-II, which lists eight data items for all reporting libraries, groups all libraries of the same type together and, within each type, subgroups all libraries by governmental organization. This table was conceived as a convenient tool for librarians to find and make comparison with libraries of the same type. To conserve space, only eight key items were chosen for this table, but the user can obtain further information for libraries of particular interest by using table A-I.

Symbols Used in Tables A-I and A-II

The following symbols are used in these tables:

- * An asterisk is printed to the right of any data figure which was given as an estimate.
- A dash is used to indicate that the data item is not applicable for the reporting library or could not be reported because it was not controlled by the library.
- 0 A zero indicates that the library reported zero quantity for the particular item or that a zero could be inferred from the data which were reported. In some instances a zero may indicate that the data category, e.g., expenditures for library materials, is not within the control of the library.
- A Only aggregate data for a group of libraries were available in some instances. The letter A following any library name or preceding any data figure is used to indicate these aggregate data reports. Data in this category are generally not included in the summary statistical tables for libraries providing data individually, which are discussed in chapter 4. A brief summary of aggregate data

excluded from summary tables in chapter 4 will be found in chapter 5. All data reported are included in the overview of Federal library statistics in chapter 2.

- Y Yes - library performed the service indicated at the head of the column.
- N No - library did not perform the service indicated at the head of the column.

1/ Footnote numbers are used to indicate that the individual data figures do not accurately reflect the data category as defined in the questionnaire, and a footnote, referenced by number, will be found at the end of the table.

Libraries shown as nonrespondent were those which, while recognized as existing, either: failed to report data in response to the initial request and followup mail or telephone inquiry, or returned the questionnaire after the deadline for computer processing.

Space limitations necessitated the abbreviation of some individual library names; wherever possible abbreviations from the U. S. Government Printing Office Style Manual were used, others listed are nonstandard. These abbreviations, as used in tables A-I and A-II, are listed in the pages immediately following. A list of the items contained in tables A-I and A-II immediately precedes the specific table.

A few of the libraries included in these individual library listings reported data too late for inclusion in the summaries presented in the text of this report. Late additions for the most part represent proportionately negligible additions to the total data.

Footnotes to Table A-I

The following symbols and footnotes appear in table A-I:

- * Data estimated.
- Not applicable or could not be reported
- 0 Zero quantity
- A Data aggregated for more than one library (see chapter 5).
- Y Yes - library performed indicated service.
- N No - library did not perform indicated service.
- Nonrespondent Library identified as part of universe but failed to report data, or returned questionnaire after deadline.
- 1/ Includes interlibrary loan transactions.
- 2/ Includes \$700,000 for library materials for Army field law (JAG) libraries.
- 3/ Data for part of year only.
- 4/ No separate budget.
- 5/ Data for part of year only.
- 6/ Includes overhead costs.
- 7/ Other materials expenditures paid from various funds.
- 8/ Library open only part of year.
- 9/ Data reported by headquarters.
- 10/ Includes interlibrary loan transactions.
- 11/ Not paid from library budget.
- 12/ No separate library personnel.
- 13/ Includes all other operating expenditures.
- 14/ Inmate help only.
- 15/ Includes AV materials and microforms.
- 16/ Includes data for instructional materials center.
- 17/ Budget is not separated from that of media center.
- 18/ Includes all library materials.
- 19/ Included in Department of Commerce library data.
- 20/ Includes Department of Labor working fund.
- 21/ Includes AV materials and microforms.
- 22/ Includes interlibrary loans.
- 23/ No separate budget for materials.
- 24/ Includes all titles.
- 25/ Includes interlibrary loans.
- 26/ New library - data not for full year.
- 27/ Includes binding costs.
- 28/ Data for hospital and health libraries are combined.
- 29/ Not paid out of library funds.
- 30/ No separate library staff.
- 31/ All employees are non-Federal.

Eight Key Data Items in Table A-II

Eight important data items were selected for the individual library listings by type of library and location in Table A-II. Locations of the data on the questionnaire and in the "Definitions and Instructions" are indicated by item and line numbers following each heading title.^{3/} The eight items included are:

- Volumes of books and bound periodicals (item 3, line 03)
- Number of periodical titles received (item 5)
- Number of circulation transactions (item 6)
- Operating expenditures: salaries and wages (item 9, line 01)
- Operating expenditures: library materials (item 9, sum of lines 02, 03, 04, and 05)
- Operating expenditures: total (item 9, line 07)
- Number of employees (full-time-equivalent): 1410 series (item 12, line 10, sum of columns b and c)
- Number of employees (full-time-equivalent): total (item 12, line 12, sum of columns l and m)

^{3/} Questionnaire for SURVEY OF FEDERAL LIBRARIES, 1972 - appendix C-I; "Definitions and Instructions," SURVEY OF FEDERAL LIBRARIES, 1972 - appendix C-II.

Footnotes to Table A-II

The following symbols and footnotes appear in table A-II:

* Data estimated.

- Not applicable or could not be reported.

0 Zero quantity.

A Data aggregated for more than one library (see chapter 5).

Nonrespondent Library identified as part of universe but failed to report data, or returned questionnaire after deadline.

1/ Includes all other operating expenditures.

2/ New library - data not for a full year.

3/ Includes binding costs.

4/ Included in data for hospital library at the same location.

5/ Includes data for health library at same location.

6/ Not paid from library funds.

7/ No separate library staff.

8/ No separate budget.

9/ Includes overhead costs.

10/ Other materials expenditures paid from various funds.

11/ Includes interlibrary lending transactions.

12/ Includes AV materials and microform.

13/ Included in Department of Commerce library data.

14/ Includes interlibrary lending transactions.

15/ Includes \$700,000 for library materials for Army field law (JAG) libraries.

16/ Data for part of year only.

17/ Includes all library materials.

18/ Includes Department of Labor working fund.

19/ Includes AV materials and microforms.

20/ Includes interlibrary lending transactions.

21/ No separate budget for materials.

22/ All employees were non-Federal.

23/ New library - data not for full year.

24/ Includes data for health library at the same location.

25/ Included in data for health library at the same location.

26/ Not paid from library funds.

27/ Inmate help only.

28/ Data for part of year only.

29/ Library open only part of year.

30/ Data reported by headquarters.

31/ Not paid from library budget.

32/ No separate library personnel.

33/ Includes data for instructional materials center.

34/ Budget not separated from media center.

APPENDIX B

METHODOLOGY FOR
SURVEY OF FEDERAL LIBRARIES, 1972

APPENDIX B

METHODOLOGY

Following discussions of the subcommittee on statistical programs of the Federal Library Committee (FLC) and the Library Surveys Branch, National Center for Education Statistics (NCES), a decision to conduct a comprehensive study of all types of Federal libraries was made. In order to insure maximum comparability of data gathered on Federal libraries with that published on other types of libraries by the Survey Branch, the Library General Information Survey (LIBGIS) questionnaire developed for the Library Surveys Branch was chosen as the model for data collection instruments to be used in the Federal survey. Work on the survey began in late March, 1972.

Six phases were undertaken to accomplish the objectives of the survey. They were:

1. Identification of the total universe of Federal libraries of all types in all Federal government organizations.
2. Development of data collection instruments relevant to Federal libraries and coordinated with standards for national library data reporting.
3. Collection of data from the libraries identified.
4. Processing the data to develop comprehensive tabulations and aggregations of them.
5. Analyzing and interpreting the data to describe the Federal library community, and to make comparisons between segments of it.
6. Preparing a report for publication which might be useful both for future Federal library planning, and for coordination with information programs on other levels.

Phase 1: Identification of the Federal Library Universe

The principal initial task in the project design was the identification of the total universe of Federal libraries. The project benefited from earlier work by the Federal Library Committee in cooperation with the U. S. Office of Education. An initial universe of over 2,500 libraries was drawn from four sources: The Roster of Federal Libraries^{1/} compiled by

^{1/}Benton, Mildred and Ottersen, Signe, Roster of Federal Libraries. Washington, George Washington University, 1970.

Mildred Benton and Signe Ottersen and published in 1970; the United States Organization Manual, 1971/72;^{2/} current mailing lists of the Federal Library Committee; and addresses supplied by major Federal agencies.

An extensive effort was made to identify libraries which had been established, transferred to another Federal agency, or abolished since the publication of The Roster of Federal Libraries. Significant changes were noted in the Federal library community since 1970; notably, the establishment of the National Oceanic and Atmospheric Administration and the Environmental Protection Agency, with subsequent transfers of libraries to these agencies. In addition, numerous military libraries were consolidated or closed during this period, particularly in the Far East and Pacific commands; a few Indian school libraries were transferred from Federal to State control.

For the purposes of this survey a Federal library or library system was defined as "An organization concerned with selecting, acquiring, organizing, recording, preserving, retrieving, and disseminating informational materials. Includes the services of a staff trained to provide and interpret such materials to meet the informational, educational and/or recreational needs of a Federal agency or installation and established as an integral part thereof." Specifically excluded from the survey were information centers, information analysis centers, data centers, and data analysis centers, unless incorporated within a library; medical records libraries, training aid libraries, and supply catalog libraries. In order to include the full range of Federal libraries no minimums on size of holdings, staff, or operating expenditures were established for inclusion in the universe.

Approximately 500 addresses were added to the Federal Library Committee's mailing list and agency listings yielded approximately 100 additional libraries. Following the initial mail-out, approximately 300 additional addresses were obtained and added to the universe.

Deletions

A major group of Federal libraries was deleted from the universe prior to the mail-out. Because of anticipated problems with central funding and shared employees, the 289 libraries in dependent schools operated overseas by the U. S. Army, Air Force, and Navy were not individually surveyed. Headquarters commands for the Pacific and Far East, Atlantic, and European areas were requested to provide aggregate statistics for school libraries within their commands. These aggregate data are presented in chapter 5. Libraries operated by the District of Columbia (an independent agency of the U. S. Government) were also excluded from the Federal library universe.

Following the mail-out, 1,162 deletions were made from the universe. The U. S. Information Agency requested the deletion of the 132 libraries operated

^{2/} U. S. Government Organization Manual. Washington, Federal Register Division, 1971/72.

overseas by the U. S. Information Service; limited information on these libraries is also presented in chapter 5. The U. S. Department of Commerce advised the Federal Library Committee that its 42 field office libraries contained business reference periodicals for use in their information centers and did not constitute a "library" as defined by the survey. Libraries operated by Federal Reserve Banks were also deleted at the request of the Federal Reserve System. Class A and B field law libraries operated by the Department of the Army were unable to provide adequate statistics at the local level; an aggregate sum of \$700,000 for fiscal year 1972 materials purchases for all Army field law libraries was included in the report filed by the Army Library.

The closing and consolidation of many military special services libraries, particularly in the Pacific and Far East commands, caused 141 deletions from the universe. Army command librarians in Korea, Thailand, and Vietnam completed single reports giving aggregate statistics for the 65 libraries within their commands; aggregated data are presented in chapter 5. As a matter of agency policy, libraries operated by the Central Intelligence Agency were deleted from the universe.

A group of 56 private contractor libraries was deleted from listings for the Atomic Energy Commission and the National Aeronautics and Space Administration.

Revised Universe and Nonrespondents

After deletions, the final survey universe contained 1,908 Federal libraries. Libraries that failed to respond to the survey, or forwarded questionnaires after the cut-off date for processing totaled 164. Of the final survey universe of 1,908, 1,389 or 73 percent provided individual responses; aggregate data were provided by 355 or 18 percent; the total response rate was 91 percent. With the addition of the minimal data provided for United States Information Agency and Army field law libraries, some response was made for 2,145 or 93 percent of the total Federal library identified universe of 2,313 libraries.

Phase 2: Questionnaire and Pretest

Construction, testing, and revision of the survey instrument required approximately 4 months. As a first step in the design of the questionnaire, a review was undertaken of surveys previously conducted within the Federal library community. Of particular interest was the Survey of Special Libraries Serving the Federal Government^{3/} published by the U. S. Office of Education in 1968.

^{3/} U. S. Office of Education. Survey of Special Libraries Serving the Federal Government. Washington, Department of Health, Education, and Welfare, 1968.

A draft version of the Library General Information Survey (LIBGIS) questionnaire prepared for the Library Surveys Branch of the National Center for Education Statistics (NCES) was used as a model for this survey. Whenever possible the wording of the questions for this survey conformed to the LIBGIS instrument.

Each item in the model form was reviewed by the principal investigator and project consultants to select data applicable to Federal libraries. Data items unique to Federal libraries, i.e., Civil Service classifications and ratings, percentage of congressionally appropriated funds, etc., were also reviewed for inclusion in the survey form. A major difficulty in the survey design was isolating common data items among Federal libraries which vary so widely in size, staff, operating expenditures, and mission.

A first draft of the survey form with definitions, instructions, and proposed statistical tables was submitted to the NCES and the FLC's subcommittee on statistical programs.

Further revisions were undertaken after meeting with members of the statistical subcommittee; data items eliminated included physical facilities and volumes and titles added during the fiscal year. Type of library classification was expanded and more examples added throughout the definitions and instructions. Particular consideration was given to the problem of systems headquarters such as those operated by the Veterans Administration, Army, Navy, and Air Force library programs. These headquarters incur significant expenditures for personnel, centralized cataloging, acquisition, and administrative functions. The form was designed to permit system headquarters to report only those items which pertained to their operation. Library systems operated on military posts were specifically excluded from the instructions for systems headquarters.

After completing revisions suggested by NCES and the statistical subcommittee, a draft survey form was prepared for pretesting to pinpoint problem areas in the design of the form and wording of the definitions and instructions.

A stratified random sample of 35 Federal libraries and 4 system headquarters was drawn for the pretest. Since statistics for fiscal year 1972 were not yet available, each library and headquarters was asked to complete the draft survey form using available data or estimates. An evaluation form accompanying the survey requested comments on the length of time required for completion, specific data not readily available, and observation of the clarity of the definitions and instructions.

Librarians at 35 of the 39 pretest units were called for telephone followup interviews; comments and reactions were elicited during these interviews. The pretest instrument was also circulated among members of the statistical subcommittee, the National Center for Education Statistics, and project consultants.

Response from pretest libraries and headquarters was 59 percent; approximately 17 percent of the units sampled reported they were unable to respond due to staff shortages, preparation of annual reports for their own agencies, or other limiting factors. The period of time allowed for response to the pretest was briefer than normally desirable due to project deadlines; however, responses were received from at least one of each type of Federal library and all of the system headquarters.

The pretest results were tabulated by individual data items and definitions and instructions; overall comments were also noted. A number of revisions were made in the test form as a result of the pretest evaluation; the revised questionnaire was circulated among all members of the statistical subcommittee for final review. An approved final version was submitted to the National Center for Education Statistics in July for form design.

To assist in future Federal library surveys, a record was maintained of suggested data items which might be desirable to obtain at a later date. The form was also designed to allow space for librarians to correct library addresses and agency designations to aid in updating of the Federal Library Committee's address files.

Phase 3: Data Collection

The Survey of Federal Libraries, 1972 was mailed from Washington, D. C. on September 6, 1972, to 2,420 libraries in the continental United States and overseas. Airmail was used for overseas libraries and libraries located west of the Mississippi River. Included in the survey package was a cover letter signed by L. Quincy Mumford, Chairman of the Federal Library Committee, urging cooperation from Federal librarians in completing and returning the survey. A self-addressed franked envelope was included in each packet for librarians' use in returning the questionnaire. Two sets of survey forms and instructions were mailed to each Veterans Administration hospital with a memo requesting completion of separate forms for medical and patients' libraries.

The deadline for completion of the survey was October 13, 1972. Reminder post cards were mailed to each library on September 18th; approximately 200 libraries had failed to receive the original mailing and requested duplicate packets. The first followup was made by mail on October 23 to 1,175 libraries; a second reminder letter accompanied by a duplicate survey packet was mailed to 810 nonrespondent libraries on November 27. In early January, 1973, an intensive followup by telephone was begun; approximately 250 nonrespondent libraries within the continental United States were contacted during January and February. Lists of nonrespondents were also circulated to Army command librarians in Germany, Okinawa, and Vietnam and to Air Force and Navy command librarians. The final followup effort resulted in the return of approximately 125 additional survey forms and the deletion of 75 libraries which were no longer in operation. Key punching was closed in late March 1973.

Phase 4: Data Processing

Manual Edit

Processing of completed questionnaires began in late September, 1972; survey forms were checked in and files established for respondents, deletions, and nonrespondents. Premachine manual edit instructions were written, detailing truncation of library names for individual listings, location, type of library, and agency codes, general editing instructions, and specific item requirements. Zeros were to be inserted in blank cells only when the column that contained the blank had at least one figure and a total. All other blank cells were marked with the nonresponse symbol, including cells for questions not applicable to the responding library. Totals were manually checked and corrections made prior to the machine edit.

Questionnaires were processed in batches; the first 100 forms were reviewed following the manual edit for procedural errors and clarity of editing instructions. To avoid contacting responding libraries more than once, questionnaires were submitted for machine processing unless lacking a response to the following "must" items: Total number of volumes, number of periodical titles, operating expenditures, and number of employees. Veterans Administration hospitals, for which only one report for hospital and medical libraries was received, were also contacted prior to the machine edit and requested to complete a separate form for each library.

A list of footnotes was maintained throughout the manual edit; the most frequent use of footnotes occurred in operating expenditures and in number of employees for libraries which reported no separate library budget or library staff.

Machine Processing

Data processing specifications included specific item instructions, keypunching instructions, checks for internal consistency and tolerance limits, generation of totals, and requirements for computer tabulation and machine generation of statistical tables and institutional listings by agency and type of library. Computer programs for machine edit and tabulation of data were developed by Library of Congress programmers.

An initial batch of 100 survey forms was submitted in October for machine processing to evaluate keypunching accuracy and the machine edit program.

Error Resolution

Instructions were compiled for postmachine error resolution. Errors generated by incorrect totals or keypunching mistakes were readily resolved. Edit memos with cover letters were sent to respondents whose questionnaires lacked response to key items or contained ambiguous entries. As part of the review of the overall edit plan, items which were most often in error were noted. Guidelines were formulated for generic cases and highly individual cases were referred to the principal investigator for resolution.

Edit memos or telephone inquiries to 400 libraries were utilized to resolve 475 error reports in critical data items. A breakdown of errors by item is shown in table B-I.

Table B-I.--Number of error reports on data items,
survey of Federal libraries, fiscal year 1972

Item	Number of error reports
Number of auxiliary libraries	10
Number of volumes	50
Number of titles	60
Number of periodical titles	95
Operating expenditures	130
Number of employees	130

A substantial number of errors were noted among reports filed by VA hospitals: 278, or 58 percent, of the 475 individual error messages necessitating followup were generated by reports from 70 VA hospitals. Apparently VA librarians encountered difficulty in allocating holdings, operating expenditures, and personnel between their hospital and medical libraries. Because of the lack of separate statistical data for hospital and medical libraries, estimates were provided by respondents in many cases.

The postmachine error resolution required second followup memos or telephone inquiries to 120 libraries. At the close of keypunching in late March, approximately 5 percent of the edit queries remained unanswered.

Table B-II lists the items which presented significant difficulty to responding librarians, with major causes for difficulty or inability to complete the item. Percentages of nonresponse are based on the 2,145 libraries which provided some data in the survey.

Table B-II.--Major reasons for failure to complete five significant data items, with percentages of nonresponse. survey of Federal libraries, fiscal year 1972

Item number	Data requested	Percent of nonresponse (n=2,145)	Major reasons for difficulty or failure to complete item
3	Number of volumes held in book stock and periodical collection.	14	Unbound volumes in periodical collection difficult to count; large periodical collections which are cataloged are counted as book stock and not shown; publications in microform counted by piece, not volume, in some libraries.
4	Number of titles in all collections (also, paperbound items not considered accountable property by Army libraries but could be significant part of collection, e.g., looseleaf encyclopedias).	39	Many libraries do not keep these data and were not willing to expend time necessary to estimate; some confusion experienced in counting audiovisual materials; a few libraries disliked counting audiovisual material titles along with other types of material; Federal libraries which have such material as legal histories of legislation and congressional hearings vary in their methods of recording and counting; libraries with large collections of microform felt it should be counted separately; other libraries noted there was no place to record significant collections of music, photographs, maps, etc.
5	Number of periodical titles received for collection.	33	An apparent problem with the design of the survey form emerged - many libraries used this cell for a total for item 4 directly above; a few libraries confused number of periodical subscriptions with title count of periodicals; libraries which catalog periodicals responded zero to this question.
9	Operating expenditures.	22	Many Federal libraries do not receive separate operating budgets and were unable to supply this information - examples are Army libraries in some overseas commands, and libraries operated by U. S. courts; Veterans Administration libraries had difficulty dividing expenditures between hospital and medical libraries; expenditures <u>not</u> charged to the library budget, e.g., training,

Table B-II.--Major reasons for failure to complete five significant data items, with percentages of nonresponse: survey of Federal libraries, fiscal year 1972 (Continued)

Item number	Data requested	Percent of nonresponse (n=2,145)	Major reasons for difficulty or failure to complete item
9	Operating expenditures (continued).	22	binding, etc., are not included; staff positions funded by higher headquarters are counted in personnel but not in operating expenditures; one Federal library is in a program planning and budgeting mode and as a result has many items such as annual and sick leave, mail, telephone service, transportation, equipment, etc., which are not normally included in most Federal library budgets - this particular library deleted the items not generally reported by Federal libraries as operating expenditures in order to more accurately compare its budget with other of its size in the Federal community. Also, some Indian school libraries are components of instructional materials centers and cannot separate figures for the library component. One library noted that its primary function is the preparation of a comprehensive bibliography, but funding for the work is not part of the library budget.
12	Number of employees.	19	Veterans Administration hospitals have personnel who divide their time between hospital and medical library - some difficulty in estimating time spent in each; correlation between personnel reported as of June 30, 1972, and expenditures for salaries may be inaccurate due to temporary help or other personnel not employed full year; many smaller libraries do not have a separate library staff and experienced difficulty in estimating time spent on library duties, e.g., libraries operated by National Park Service; prison libraries are frequently staffed by inmate help; several categories of non-Civil Service employees emerged, including contract employees, local nationals employed in overseas military libraries, and excepted appointments.

Phases 5 and 6: Analysis of Data and Preparation of Report

The 1972 survey marked the first time that all types of Federal libraries were studied and measured. For this reason, analysis in depth was undertaken to provide a comprehensive description of the Federal library community and to compare numbers and kinds of libraries both within the Federal community and within individual governmental organizations. Preliminary analysis and a first draft of the report of the survey were completed by November 1973.

The report and statistical tables were then presented to library representatives of organizations with substantial numbers of Federal libraries, for review and comment. In addition, members of the FLC subcommittee on statistical programs undertook a detailed review of the report and data to ensure maximum accuracy of interpretation and comprehensiveness of analysis. This review was completed in July 1974, and after necessary revisions, the report was submitted for editing in August. Editing was completed in January 1975, corrections made, and final preparation of copy was completed in February 1975.

APPENDIX C

SURVEY INSTRUMENTS FOR
SURVEY OF FEDERAL LIBRARIES, 1972

APPENDIX C-I

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE OFFICE OF EDUCATION WASHINGTON, D.C. 20202		FEDERAL LIBRARY COMMITTEE LIBRARY OF CONGRESS WASHINGTON, D.C. 20540		O.M.B. NO. 154-R0001 APPROVAL EXPIRES: 6/30/74
SURVEY OF FEDERAL LIBRARIES, 1972				DUE DATE September 29, 1972
A. ADDRESSEE			IF THIS IS A SYSTEM HEAD- QUARTERS REPORT, PLEASE CHECK HERE ☐	
PLEASE CROSS OUT ANY ERRORS IN THE ABOVE ADDRESS AND WRITE CORRECTIONS IN THIS SPACE:			DO NOT WRITE IN THIS SPACE	
B. FIRST NAME, MIDDLE INITIAL, LAST NAME, AND TITLE OF PERSON FURNISHING INFORMATION			C. DATE	D. AREA CODE
			E. TELEPHONE NUMBER & EXTENSION	

PLEASE COMPLETE ITEMS A-E ABOVE AND READ ATTACHED DEFINITIONS AND INSTRUCTIONS AS YOU ANSWER EACH QUESTION.

The Federal Library Committee is conducting this survey in cooperation with the National Center for Educational Statistics. All libraries in Federal agencies world wide are to be surveyed. A Federal library or library system is defined as:

An organization concerned with selecting, acquiring, organizing, recording, preserving, retrieving, and disseminating informational materials. Includes the services of a staff trained to provide and interpret such materials to meet the informational, educational and/or recreational needs of a Federal agency or installation and established as an integral part thereof.

To be EXCLUDED from this survey are:

Information centers, Information Analysis centers, Data centers, and Data Analysis centers, unless incorporated within a library; Medical Records libraries, Training Aid libraries, and Supply Catalog libraries.

Each of the Federal libraries reporting should include in its report data for the branches and other outlets that it operates, and data for the services and materials that it provides to other libraries, institutions, and organizations, and to all areas by contract or formal arrangement.

Federal library system headquarters that operate separately from (or that can be accounted for separately from) member libraries will fill out this form in the same manner as a library, reporting in terms of its service outlets, if it has any that are open to library users. System headquarters which do NOT have a service outlet should fill out only items 3, 4, 5 and 7, 8, 9, 10, 11 and 12. This report should be clearly identified for the SYSTEM HEADQUARTERS by a check in the upper right-hand corner of this page. Do NOT include data for member libraries.

Please return completed form in enclosed postage-free envelope to:

FEDERAL LIBRARY COMMITTEE
Library of Congress
Washington, D.C. 20540

SURVEY OF FEDERAL LIBRARIES, 1972 Definitions and Instructions

Introduction

The Federal Library Committee, in participation with the National Center for Educational Statistics (NCES), is collecting data for all Federal libraries in a manner similar to the Library General Information Survey (LIBGIS) that will collect compatible data for all types of library agencies, library systems and networks, and local libraries. To be consistent with the LIBGIS system this survey of Federal libraries required the formulation of some new concepts and the adjustment of some of the old concepts for library data collection. Every effort has been made to state the questions in terms of the recordkeeping procedures which are ordinarily used by libraries. For example, materials are to be counted by the collections into which they are organized, since this is the manner in which shelf lists are set up.

Although some of the questions asked in this survey may be difficult for you to answer, the Federal Library Committee will appreciate your sincere effort to provide actual or estimated data for all of the items on the survey form. Reliable sampling techniques should be used whenever possible to obtain estimates of the requested data if not available. After the completion of this first effort to obtain these data for all Federal libraries, it will be the Federal Library Committee's goal to stabilize the report form and to provide information copies and recommended recordkeeping procedures one year in advance so that libraries may keep their records in a manner that provides the required data.

General Definitions and Instructions

The general definitions which follow apply to this survey only, as do the specific definitions incorporated with the instructions for each item. Although the guidelines provided by the American Library Association's *Library Statistics: A Handbook of Concepts, Definitions, and Terminology* have been carefully considered, new or revised definitions have at times been developed.

REPORTING YEAR: All annual data are to cover the fiscal year 1972 that ended June 30, 1972.

LIBRARY: For the purposes of this survey, a library is defined as any organized collection of printed books and periodicals or any other graphic or audiovisual materials, with the services of a staff to provide and facilitate the use of such materials as are required to meet the informational, research, educational, and/or recreational needs of its users. A library may consist of a single unit, or it may be a

multiunit organization having branches and other outlets administered by a single director.

Administrative system headquarters and other service units that are not open to library users are NOT to be reported as a library, but will be reported for selected items in a SYSTEM HEADQUARTERS REPORT. These system headquarters will provide data for system headquarters functions. They will not include data for member libraries.

NEED FOR ESTIMATES: Each item on this form should show: (a) an appropriate figure, or (b) "0" when the quantity to be reported is zero. When the item is not applicable to your library, enter "NA". Please provide an estimate if exact data are not available, and indicate by * (an asterisk) to the right of the entry that the figure given is an estimate. DO NOT LEAVE ANY ITEM BLANK.

GENERAL INSTRUCTIONS FOR SYSTEM HEADQUARTERS ONLY
(Does not apply to post and base library systems consisting of main libraries plus branches)

Please check the box "SYSTEM HEADQUARTERS REPORT" on page 1 of the survey form. The instructions given under "RESOLUTION OF PROBLEMS PRESENTED BY LIBRARY SYSTEMS" should be read to avoid counting moneys, staff, materials, etc. more than once. If your system headquarters has a service outlet open to library users, please answer each item. If your system headquarters does not have a service outlet open to library users, please answer only items 3, 4, 5, and 7, 8, 9, 10, 11, and 12.

RESOLUTION OF PROBLEMS PRESENTED BY LIBRARY SYSTEMS: The organization of libraries into nonconsolidated systems and networks, and the transmittal of moneys to libraries through these systems and networks have created many accounting problems. Moneys counted as receipts and expenditures by each library or agency that transmits cash to another library or agency inflate agency and individual library totals, and make it appear that libraries received more money than they actually got. The accounting for shared personnel and gifts of materials and equipment also complicate library surveys. Care must be taken to assure that moneys, staff, materials,

etc. are counted only once in agency and individual library totals.

The following principles should be followed in preparing your report:

1. Moneys transmitted as cash by one library or agency to another library or agency should NOT be reported as an operating expenditure by the transmitting agency. Example: Moneys received by a system headquarters and transmitted to a member library should NOT be reported as operating expenditures by that headquarters since they were not used for performing system headquarters functions.
2. Moneys should be reported as operating expenditures at the level at which they are spent for library services, materials, or equipment. Example: A library takes the moneys it received from its system headquarters and spends them for salaries and books. The library will report these moneys as operating expenditures.

3. The actual or estimated value of services, materials, and equipment received by one library or agency as gifts or permanent deposits from another library or agency should NOT be reported as operating expenditures by the receiving library or agency. Example (1): A system headquarters takes a reference librarian who is paid by the headquarters and assigns him to work full-time, on a regular schedule, in a member library. The library will NOT report the salary for this librarian as an operating expenditure since this salary is reported as an operating expenditure by the system headquarters. Example (2): A system headquarters takes books which it has purchased and places them on permanent deposit in a member library. The library will NOT report the value of these books as

operating expenditures since the cost of the books is reported as an operating expenditure by the system headquarters.

4. Shared personnel and materials given to or placed on permanent deposit in a library should be reported as staff and holdings by the receiving library. Example: A system headquarters takes a reference librarian who is salaried by that headquarters and assigns him to work full-time, on a regular schedule, in a member library. The library will report this librarian as 1.0 full-time staff members in its report. The system headquarters, which reports this librarian's salary in its report, will NOT report his librarian as a member of its staff.

Item Definitions and Instructions

ITEM 1. TYPE OF LIBRARY

PRESIDENTIAL LIBRARIES specialize in the official records, memorabilia, literature and other materials concerning the affairs of a specific President of the United States.

NATIONAL LIBRARIES (Library of Congress, National Library of Medicine, National Agricultural Library) have Government-wide responsibilities and missions which include concern for both National and international matters.

ACADEMIC OR INSTRUCTIONAL LIBRARIES include those intended to serve the faculty and students in colleges, universities, vocational, graduate and post-graduate schools. The Service Academy libraries are included in this group, as are those military libraries which support an instructional mission (examples: Army Armor School Library, Air University Academic Library, Naval War College Library).

SPECIAL OR TECHNICAL LIBRARIES support mission plans with library and information services. This group is subdivided as follows:

HEALTH AND MEDICINE LIBRARIES are defined as those libraries whose collections are predominantly devoted to medicine and health sciences (examples: Brooke General Hospital Medical Library, National Institutes of Health Library).

ENGINEERING AND SCIENCES LIBRARIES are defined as those libraries whose collections are predominantly devoted to engineering and the sciences (examples: Army Electronics Proving Ground Technical Library, Bureau of Mines Metallurgy Research Center Library, Naval Air Engineering Center Technical Library).

ALL OTHER SPECIAL OR TECHNICAL LIBRARIES are defined as those libraries whose collections support a mission plan but are not predominantly devoted to the areas of health and medicine or engineering and science (examples: Capitol Law Library, Bureau of the Census Library, National Gallery of Art Library).

GENERAL LIBRARIES provide service to meet cultural, informational, educational and recreational needs. This group is subdivided as follows:

HOSPITAL LIBRARIES are defined as those libraries which are operated exclusively as hospital libraries and are not part of a base or post library system (examples: Naval Hospital General Library, Veterans Administration Hospital Library, Army General Hospital Patients' Library).

PENAL LIBRARIES are defined as those libraries

which serve penal institutions (examples: Federal Youth Centers, Federal Reformatories, United States Penitentiaries, Federal Correctional Institutions). Military libraries which provide service to military penal facilities will not be included in this category UNLESS they are operated separately from a base or post library system.

ALL OTHER GENERAL LIBRARIES are defined as those libraries which meet the definition of a general library and are not operated exclusively in hospitals or penal institutions (examples: libraries on military bases operated by Special Services, USIA libraries).

ELEMENTARY, INTERMEDIATE OR SECONDARY SCHOOL LIBRARIES provide school library services in military dependent schools and on Indian reservations.

ITEM 2. CENTRAL LIBRARY PLUS AUXILIARY LIBRARIES

CENTRAL LIBRARY: The single unit library, or the user service unit which is the administrative center of a multiunit library, where the principal collections are kept and handled. Also called "Main Library."

AUXILIARY LIBRARIES: These are user service units, such as branches, which have all of the following: (1) quarters that are separate from the central library, (2) a permanent basic collection of materials, (3) a permanent staff provided by the central library or the institution or organization of which the library is a part, and (4) a regular schedule for opening. They are administered from the central library and are not autonomous.

Report the number of auxiliary libraries administered by the library plus the central library as of June 30, 1972. Headquarters and other service units that ARE NOT OPEN TO LIBRARY USERS are NOT to be reported. Reporting units having no equivalent of a central library will report the number of auxiliary libraries in this item.

ITEM 3. VOLUMES HELD IN BOOK STOCK AND PERIODICALS COLLECTIONS [Note: Number added (col. b) will not be asked on this initial survey, but WILL be requested in future surveys.]

Item 3 is limited to a count of VOLUMES AND BIBLIOGRAPHIC VOLUMES held in book stock and periodicals collections.

MICROFORMS: Microforms are materials that have

ITEM 3. VOLUMES HELD (continued)

been photographically reduced in size for storage and protection purposes, and which must be read with the help of enlarging instruments. Examples of microforms are: microfilm, microcard, and microfiche. These are also called microcopy and microtext.

Lines 01 and 03

BOOK STOCK: A library's cataloged or recorded collection(s) of books or of other materials (such as documents, pamphlets, paperbound books, technical reports, manuscripts, memoirs, proceedings, transactions of societies, and monographic and publishers' series) PREPARED AND RECORDED IN THE SAME MANNER AS BOOKS AND WHICH MAY BE INTERFILED WITH BOOKS. Documents, paperback books, and other materials that are NOT treated in the same manner as book stock should NOT be reported as book stock. A definition of a document is given in instructions for item 4, line 02.

BOOK STOCK - VOLUMES: Report the number of physical units of book stock contained in one binding or portfolio. Do NOT report photographically reduced volumes in microform. Because of the problems involved in equating microfilm with volumes of book stock, this count is not requested.

Lines 02 through 06

PERIODICALS COLLECTION(S): A library's collection(s) of magazines, newspapers, and of other serial publications that are processed in the same manner as magazines and newspapers, and located in the periodicals section(s) of the library. Serial publications that have been cataloged, recorded, or classified into collections in such a manner that they cannot readily be identified as serial publications should NOT be reported with periodicals collections. For example, a newspaper or a yearbook that has been cataloged as a volume of book stock is to be reported with book stock. A magazine or annual report issued by an agency and classified with general documents in the documents section of the library is not to be reported since it is not handled as a serial publication.

Lines 04 and 08

BIBLIOGRAPHIC VOLUME: A bibliographic volume is the publisher's volume (i.e., the unit established by the publisher as a volume). A bibliographic volume may or may not correspond to one year's issue of a title. For example, *Time*, v. 95 and 96, 1970, is TWO bibliographic volumes.

HOW TO ESTIMATE BIBLIOGRAPHIC VOLUMES: As a general rule, a bibliographic volume corresponds to one year's issue of a title. If you have difficulty in counting the number of bibliographic volumes, report the NUMBER OF WHOLE YEARS for which you have holdings and indicate by an * (an asterisk) that the number reported is an estimate. Do NOT report fractions of a year.

ITEM 4. TITLES HELD IN ALL COLLECTIONS. [Note: Number added (col. b) will not be asked on this initial survey but WILL be requested on future surveys.]

SHELFIST: A record of materials in a library, arranged in the order in which the materials stand when they are shelved or stored.

TITLES: Report the number of items for which a separate shelflist card has been made. Thus, six copies of the same edition of an item count as one title; two editions of the same title which have

been cataloged or recorded separately count as two titles; a set of six items for which six shelflist cards have been made counts as six titles; and two sets of the same edition for which one shelflist card has been made count as one title.

METHOD FOR ESTIMATING THE NUMBER OF TITLES IN THE COLLECTIONS: A library which does not maintain a title count for its various collections or that cannot easily count the number of separate shelflist cards may use the following statistically sound method for estimating this count:

1. Count the number of titles in 1 inch of shelflist cards in the shelflist;
2. Repeat step one at random intervals (e.g., count 1 inch in every foot) throughout the shelflist;
3. Average the number of titles per inch;
4. Multiply the average titles per inch by the number of inches of cards in the shelflist.

MICROFORMS: For definition, see item 3.

Lines 01 through 03

BOOK STOCK: For definition, see item 3, line 01.

Line 02

DOCUMENTS: Report here publications bearing a government imprint, technical reports, and classified (security controlled) materials that have not been reported with book stock collections.

Line 03

ALL OTHER TITLES OF PRINTED MATERIALS: Printed materials are materials which, unless in microform, do NOT require special equipment in order to be utilized. Report in line 03 the number of cataloged or recorded titles in collections that have not been reported in lines 01 and 02 (such as periodicals collections, sheet music collections, map collections, manuscript collections, art print collections, etc.).

Line 06

ALL OTHER TITLES OF AUDIOVISUAL MATERIALS: Audiovisual materials are materials that are produced to be viewed or heard and which require special equipment in order to be utilized. They do NOT include printed materials that have been photographically reduced in microform.

ITEM 5. TITLES CURRENTLY RECEIVED FOR PERIODICALS COLLECTION(S)

For definition of "Periodicals collection(s)," see item 3. Include active titles currently received in microform along with all other active subscriptions. Duplicate subscriptions to the same title count as one title.

ITEM 6. LIBRARY MATERIALS LENT THROUGH DIRECT CIRCULATION TO LIBRARY USERS

LIBRARY MATERIALS: These are all of the materials available to the library, including both printed and audiovisual collections which the library owns and collections on permanent and/or temporary deposit in the library.

NUMBER OF TRANSACTIONS: Report the number of transactions or negotiations of charging out one or more pieces of library material as a single record-keeping unit. In most charging systems, a book is charged out and counted as one transaction. For

ITEM 6. LIBRARY MATERIALS LENT (continued)

example, five discs contained in one sound recording album and charged out as an album count as one transaction. A box of slides charged out as a box counts as one transaction. Several pages of photocopy lent in response to one request should be counted as one transaction.

DIRECT CIRCULATION TO LIBRARY USERS: Only loan transactions of materials charged directly to library users for use outside the library should be reported. Do NOT include a count of the call slips used to obtain materials from closed stacks or other counts of use within the library. Do not include a count of materials lent in bulk loans or lent to other libraries on interlibrary loan.

ITEM 7. LIBRARY MATERIALS LENT OR RECEIVED ON INTER-LIBRARY LOAN

NUMBER OF TRANSACTIONS: Report the number of negotiations of lending or receiving one or more pieces of library material as a single record-keeping unit. Therefore, if several items are received or lent as a single record-keeping unit, the negotiation counts as one transaction. For example, a box of slides received by you as a single unit counts as one transaction of materials received. Several pages of photocopy lent in response to one request should be counted as one transaction.

INTERLIBRARY LOANS: These are materials received by your library in answer to specific title, author, or subject requests; or materials lent to libraries NOT under your library's administration in response to specific title, author, or subject requests. Do NOT include bulk loan or rental collection transactions.

ITEM 8. INFORMATION TRANSACTIONS

INFORMATION TRANSACTIONS: Information transactions are transactions which call for library staff skill in (a) supplying information, as contrasted with materials; (b) interpretation of library holdings; and (c) compilation of citations and/or data. Such transactions would include, but not be restricted to, the following:

1. Transmission of oral and written data (often called reference questions);
2. Translation of documents;
3. Compilation of bibliographies, book-lists, citations;
4. Provision of computer printouts.

No distinction is made as to whether the information request involves a high degree of skill (as contrasted with "spot-check" transactions), or as to the length of time involved on the part of the library staff. Report the number of information transactions made in person, by telephone, and through correspondence. Do NOT report the number of data bits supplied, simple location and direction requests, or the provision of call numbers for materials owned by the library.

Line 01

PROVIDED DIRECTLY TO LIBRARY USERS: Report the number of information transactions that your library provided directly to library users regardless of whether the information was supplied from library materials in your library or requested for the library user from another library or agency

that is not administered by your library.

Line 02

PROVIDED TO OTHER LIBRARIES: Report the number of information transactions provided to libraries and agencies that are NOT under your library's administration. Do NOT report information transactions provided to auxiliary libraries (branches, deposit stations, or other service outlets) that are administered by your library.

ITEM 9. OPERATING EXPENDITURES

OPERATING EXPENDITURES: Operating expenditures are expenditures incurred during the reporting year in the running of the library. Report expenditures of funds from all sources. Only expenditures from operating funds are to be reported. Actual or estimated costs of services, materials, and equipment provided without charge to the library are not to be included (i.e., such materials and services as book kits or centralized cataloging which are provided without charge by a system headquarters are not to be included).

Line 01

SALARIES AND WAGES: Report the salaries and wages paid from your operating funds to all except maintenance employees, including full and part-time employees assigned to work ON A REGULAR SCHEDULE in another library or agency. Do NOT include fees paid to outside consultants hired in connection with the library program or special projects. Maintenance staff salaries and wages, and consultant fees, are to be reported with "All other operating expenditures" in line 06.

Lines 02 through 05

LIBRARY MATERIALS: Report in lines 02 through 05 operating expenditures for the purchase or rental of all library materials. Include expenditures for library materials that were purchased for the library's permanent collections; for gifts, and for permanent deposit in other libraries and agencies that are not administered by your library. Materials purchased by centrally-held funds (e.g., book kits purchased by a system headquarters) are not to be reported on this form.

RENTAL FEES FOR LIBRARY MATERIALS: Expenditures for rental and circuit materials should be reported within the expenditures for the various types of materials (e.g., the expenditures for rental books should be reported as expenditures for printed materials; expenditures for rental motion picture films and for membership in a film circuit should be reported as expenditures for audiovisual materials).

PRINTED MATERIALS: Report expenditures for all published, manuscript, typescript, and photocopies of written works that are not reduced in microform, and all other graphic works that are produced by printing processes. These include books, periodicals, pamphlets, documents, sheet music, maps, and unframed art prints.

PRINTED MATERIALS IN MICROFORM: For a definition of microform, see item 3.

AUDIOVISUAL MATERIALS: These are materials, such as motion picture films, sound recordings, filmstrips, and slides, that are produced to be viewed or heard and that require special equipment in order to be utilized. DO NOT REPORT EXPENDITURES FOR PRINTED MATERIALS THAT HAVE BEEN PHOTOGRAPHI-

ITEM 9. OPERATING EXPENDITURES (continued)

CALLY REDUCED IN MICROFORM. Expenditures for microform are to be reported in line 03.

ALL OTHER LIBRARY MATERIALS: Report expenditures for those materials that do NOT belong in the categories of printed and audiovisual materials cited above. These include mixed media (such as kits containing both printed and audiovisual materials); games; globes; framed art prints; photographs and original art works; art objects; realia, etc.

Line 06

ALL OTHER OPERATING EXPENDITURES: Report all expenditures for the operation of the library other than those already specified. These include expenditures for maintenance of the plant (including salaries and wages for maintenance staff); personnel insurance and fringe benefits (e.g., social security, retirement, pensions, life insurance, health insurance, etc.); utilities; rent; interest on loans; recruiting expenses; in-service training; travel; dues; property insurance; supplies; binding and rebinding; rental of equipment; and fees paid to outside consultants hired in connection with the library program and/or special projects. Contracts with non-library agencies are also to be reported in this line. DO NOT REPORT MONEYS SPENT FOR INVESTMENTS, THE REPAYMENT OF THE PRINCIPAL ON LOANS, MONEYS TRANSFERRED AS GRANTS TO OTHER LIBRARIES AND LIBRARY AGENCIES, OR MONEYS TRANSFERRED TO OTHER FUNDS OR RETURNED TO GOVERNMENT SOURCES OR TO THE PARENT INSTITUTION.

ITEM 10. LIBRARY ACTIVITIES

Check "Yes" if activity is customarily performed by your library. If performed only rarely, answer "No."

ITEM 11. HIGHEST EDUCATIONAL LEVEL OF PERSON IN CHARGE OF LIBRARY

This information will not be given for individual libraries in the survey report. It will appear only in aggregate statistics in which individual libraries will not be identifiable.

ITEM 12. EMPLOYEES IN FILLED POSITIONS AND BUDGETED VACANT POSITIONS

FILLED AND VACANT POSITIONS (EXCLUDING MAINTENANCE): Report in this item all library positions except those for personnel whose duties are concerned with the maintenance of the plant (e.g., building engineers, custodians, janitors, and guards). Examples of the categories of positions to be included are: professionals, subprofessionals, paraprofessionals, library technicians, clerks, bookmobile drivers, Xerox operators, paid student assistants, pages, and assigned military personnel.

If another library or agency (e.g., a system headquarters) hires an employee to work ON A REGULAR SCHEDULE in your library, report this position with those positions established in your operating budget. Contrariwise, if your library pays the salary of an employee and assigns him to work ON A REGULAR SCHEDULE in a library that is NOT administered by your library, the hours that this individual is assigned to work in another library are NOT to be reported with your filled and vacant positions.

Report filled and vacant positions for employees

who work the full-time work week established for your library and compute FULL-TIME EQUIVALENTS FOR PART-TIME EMPLOYEES. To compute "full-time equivalents" (FTE) of part-time employees, take the number of hours worked per week by a part-time employee and divide by the number of hours in your full-time work week (or by the number of hours considered by your institution to be a full-time work week if your full-time work week is fewer than 32 hours per week).

For example, a part-time employee who works 25 hours per week in a library having a 40-hour week is computed as follows: $25 \div 40 = .625$. Add the total of all FTE for each category of employee and round the sum to one decimal point. Report this amount in the appropriate spaces. For example, the above employee working 25 hours per week and one other part-time employee in the same category working 20 hours per week are computed as follows: $.625 + .500 = 1.125 = 1.1$

Columns (b) through (k), lines 01 through 08

NUMBER OF APPROPRIATED FUND AND NON-APPROPRIATED FUND EMPLOYEES IN FILLED POSITIONS: Report here the number of full-time equivalent male or female employees (excluding maintenance) for each category of employee by GS level grouping or GS equivalent. To compute "full-time equivalents" (FTE) of part-time employees, follow the formula given in the general instructions for item 12.

Column (j) and (k), lines 01 through 08

NON-APPROPRIATED FUND EMPLOYEES: Report here the number of full-time equivalent male or female employees (excluding maintenance) paid from Non-Appropriated funds for each EQUIVALENT GS-level grouping.

Column (l), lines 01 through 08

TOTAL MALE EMPLOYEES: Report here the sum of columns (b), (d), (f), (h), and (j).

Column (m), lines 01 through 08

TOTAL FEMALE EMPLOYEES: Report here the sum of columns (c), (e), (g), (i), and (k).

Column (l) and (m), line 11

ASSIGNED MILITARY PERSONNEL BY SEX: Report here the number of assigned male or female military personnel (FTE). Do not attempt to equate assigned military personnel by GS-level, but specify rank in the space provided.

Column (l) and (m), line 12

TOTAL EMPLOYEES IN FILLED POSITIONS BY SEX: Report here the total of civilian employees [Columns (l) and (m), line 10] and assigned military personnel [Columns (l) and (m), line 11].

Column (n)

BUDGETED VACANT POSITIONS: Report here the total number of full-time equivalent budgeted vacant positions (excluding maintenance) by GS-level or GS-level equivalent groupings as on June 30, 1972. To compute "full-time equivalents" (FTE) for part-time positions, follow the formula given in the general instructions for item 12.

HIGHLIGHTS OF FINDINGS

(continued from inside front cover)

- Almost one-third of all Federal libraries were located outside the United States in 1972 (table 9).
- 10 percent of Federal libraries reporting in fiscal year 1972 were located in the Washington, D. C. metropolitan area. These libraries also reported (table 11):
 - 52 percent of all bound volumes in Federal collections
 - 65 percent of all Federal library expenditures
 - 52 percent of all employees in Federal libraries
 - 51 percent of 1410 series (professional librarians) employees listed by responding libraries.
- 11,080 full-time-equivalent employees worked in Federal libraries in 1972. Almost two-fifths were in the national libraries (table 6).
- 3,209 library employees (29 percent) were professional librarians (1410 series). Almost one-third of these were employed in national libraries (table 6).
- Employment of librarians (1410 series) in the three national libraries has dropped sharply since the survey of special Federal libraries in 1965 (table 12).
- Veterans Administration libraries, with 73 percent of their employees in the 1410 series, had the highest proportion of professional librarians (table 25).
- 64 percent of all Federal library employees in 1972 were female, as were 71 percent of professional librarians.
- 71 percent of librarians in Grades GS-13 and above were male (table 6).
- 52 percent of Federal libraries reporting in the 1972 survey were in the medium size range (6,000-30,000 volumes in collection)(table 34).
- Health libraries (54 percent under 6,000 volumes) and penal libraries (53 percent under 6,000 volumes) had the smallest average number of volumes held in Federal libraries (table 36).
- Academic libraries (44 percent with over 30,000 volumes and 20 percent with over 100,000 volumes) tended to have the largest average collections (other than national libraries)(table 36).
